Teacher(s) :	
Language :	Français
Place of the course	Louvain-la-Neuve
Main themes :	<p>1. Introduction to various models in demography.</p> <p>2. Stationary and stable populations.</p> <p>3. Standard age patterns of mortality (model life tables and relational Brass logit model), nuptiality (Coale and McNeil 1972), fertility (Coale and Trussell 1974, Booth 1984) and migration (Rogers and Castro 1981).</p> <p>4. Introduction to some indirect techniques used in countries with decent data.</p>
Aims :	<p>Part A of this course consists in an introduction to the modelling of population processes. At the end of this course, students should be able to</p> <ol style="list-style-type: none"> 1. understand the general principles behind the modeling of population processes, 2. understand the relations between the movements of a population and its structure, 3. employ the most commonly used standard schedules of vital events, 4. proceed to concrete applications of some models (construction of a stable-equivalent population, indirect estimation techniques). <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Cycle and year of study :	<p>> Master [120] in Statistics: General > Master [120] in Agricultural Bioengineering > Master [120] in Environmental Bioengineering > Master [120] in Forests and Natural Areas Engineering > Master [120] in Chemistry and Bio-industries > Master [120] in Statistics: General > Master [120] in Chemistry and Bioindustries > Master [120] in Environmental Bioengineering > Master [120] in Forests and Natural Areas Engineering > Master [120] in Agricultural Bioengineering > Master [120] in Environmental Bioengineering > Master [120] in Forests and Natural Areas Engineering > Master [120] in Agricultural Bioengineering > Master [120] in Chemistry and Bioindustries > Master [120] in Environmental Bioengineering > Master [120] in Forests and Natural Areas Engineering > Master [120] in Agricultural Bioengineering > Master [120] in Chemistry and Bioindustries</p>
