CARD2MC - Introduction

CARD2MC - Admission

Decree of March 31st 2004 defining higher education, favoring its integration in the European framework of higher education and refinancing universities.

The admission requirements have to be met at the time of enrolment at the university.

All information can be obtained from the [University's Enrolment Office \(Service des inscriptions – SIC\)](#).

The following students, after meeting the conditions set by the academic authorities, have access to the complementary Master's degree with the aim of obtaining the grade that these studies sanction:

- An academic Master's degree within the same field allowing 2nd-cycle studies, including at least 120 credits
- An academic Master's degree, following a decision by the academic authorities, under the complementary conditions that they set and as a result of a motivated decision by the jury
- An academic grade which is similar to those mentioned above, issued by the Flemish Community, the German Community or the Royal Military Academy, under the same conditions
- A foreign academic grade that has been acknowledged as being equivalent to those mentioned above, in application of this decree, a European-level directive or an international convention, under the same conditions
- Under the same conditions, one or several titles or academic grade issued by the Flemish Community, the German Community or the Royal Military Academy, sanctioning 2nd-cycle studies and valued at least 300 credits by the jury, or sanctioning 2nd-cycle studies and valued at least 240 credits completed of 60 credits, the all that must be valued by the jury according to the decree of March 31st, 2004 (art 54, 5 °)

In the event of the divergence between the different linguistic versions of the present conditions, the French version shall prevail

Specific Admission Requirements

Admission conditions

First part

- The applicant must hold the degree title of Doctor in Medecine or be a Doctor from a member country of the European Union authorising medical practice in Belgium.
- The applicant must be in possession of a document attesting that, at the end of the selection exams, he was retained as a specialist candidate in Cardiology, in a Belgian medical faculty.

The juridical context and practical procedures regarding these selection tests can be obtained from the secretary's office. Degree holders from outside the European Union are only allowed to register on the programme in the context of procuring a university certificate for partially specialised training for the duration of two years (if they are in the process of doing a specialisation in their country of origin) or for an in-depth specialised training course for the duration of one year (if they are already recognised as specialists in their own country).

The Royal Decree of the 30.05.2002, relating to the planning of the medical offer for the public, published on 14.06.2002, applies to those candidates wishing to obtain the title of Specialist Doctor in Cardiology (those candidates are thus counted among the general practitioner candidates or specialists in the context of the numerus clausus).

Second part

- Candidates must have satisfied the requirements for the first exam of the specialised study degree in Internal Medecine.

Admission procedures

Applications for admission must be addressed to the academic supervisor. The organisation of the entrance selection tests is arranged in accordance with the calendar and the general examination rules and regulations.

CARD2MC - Information

Learning outcomes

This complementary master's programme aims to prepare doctors to become officially recognised holders of the specific professional title of Specialist Doctor in Cardiology (Ministerial decree of 15.09.1979, published on 26.09.1979) modified by the Ministerial Decree of 09.02.1998, published on 01.07.1998).

Evaluation

Semestrial clinical evaluations : these evaluations are established (in writing) by the practical training supervisor of each candidate and focus on different items. The evaluations of all the candidates are reviewed during the two semestrial meetings of the ensemble of the supervisors.

First part

At the end of these three years of training, each candidate will be evaluated during the course of an interview, aimed at testing his general knowledge in internal medicine. Further to the application of the Royal Decree of 16 March, 1999, at the end of the first two years of the training course, the candidate will receive an attestation proving that he has successfully accomplished a specific university training course.

Second part

At the end of the first two years of studies, each candidate will be evaluated during the course of an interview destined to test his general knowledge in Cardiology.

At the end of the third year of training, each candidate will have to defend an original thesis (20-25 pages) on a cardiological subject. This thesis will serve as a basis for the publication required by the Ministerial Decree of 09.03.1979, published on 15.03.1979.

Upon fulfilment of the above-described training requirements, the teaching committee will award the academic title in Cardiology. This title does not replace official recognition by the ministerial validation committee. It attests the successful completion of an academic and scientific study programme in the context of specialised training leading to this validation.

CARD2MC - Detailed programme

Programme structure

The training course includes full time apprenticeships in recognised services and teaching centres. It lasts for at least six years, full-time, including three years of foundation studies in Internal Medicine and a higher training of three years in Cardiology. The apprenticeship project established by the university promoter must be approved by the ministerial validation committee for the speciality. These periods of practical training include being on call.

Programme by subject

part - Foundation studies

Three years, full time, consisting of :

- Basic training in internal medicine (including emergencies and intensive care) in the form of theoretical sessions, seminars and a supervised clinical training period.
- An apprenticeship of a minimum of three months and a maximum of six months in Cardiology. The theoretical sessions of the first two years form part of the specific university training programme (FUS, in French).

part - Higher studies

Three years, full-time, during which the specialist candidate :

- will have the responsibility for caring for patients hospitalised in cardiology for a period of at least 6 mois
- will be responsible for the care of a minimum of 150 patients in polyclinic cardiology
- will participate for a minimum of 3 months in the work in the coronary Unit
- will participate in the pre- and post-operative care of cardiac patients and will be trained in operatory risk calculation for cardiac and non cardiac patients who have to undergo non surgical interventions
- will interpret a minimum of 1000 ECG and 150 Holter and participate in the control of a minimum of 50 cardiac stimulators of a standard model
- will learn the techniques and practice of effort tests by carrying out and interpreting a minimum of 300 effort tests of which a certain number will be associated with ergospirometrical and radio-isotope tests
- will learn the technique of Doppler echo-cardiography for the period of 6 months. During this period, the candidate specialist will have to personally carry out and protocol a minimum of 300 trans-thoracic exams to which 50 trans-oesophageal exams will be added.
- will participate in the cardiac catheterisation activities in the laboratory. During this period, the candidate will participate in the discussions and therapeutic decisions as well as the practising of the exams, without having to take the responsibility for them. The first hand practice of the diagnostic exams requires complementary training.
- will participate in the carrying out of 50 electro-physiological exploratory exams, as well as in the diagnoses and therapeutic decisions thereof. The first-hand practice of the diagnostic electro-physiological exams requires complementary training
- will become familiar with the factors which give rise to cardio-vascular risks, as well as with prevention thereof and the multidisciplinary functional re-education of cardiac patients.

During the first 3 years of training, the specialist candidate will likewise benefit from theoretical instruction and inter-university studies.
