Introduction

Admission

For the specific conditions of this program : refer to the French version

Information

Learning outcomes

The main objective of the minor is to train students enrolled in a bachelor programme to acquire a basic training in population and development studies, enabling them to understand and, to some extent, analyze the challenges of poverty, demographic transitions, ageing populations, North-South inequalities, and the interactions between population, environment and development.

The minor combines into a single block six courses (of 5 credits each) organized by the Department of population and development studies. . These six courses provide an overview of the population-development issues and train students to acquire knowledge in:

- demographic analysis and development theories
- population and development policies
- issues and challenges of the 21st century, both demographic as well as political, social and economic
- relationships between gender and social, economic and political inequalities
- analyses of the interaction between population, environment and development.

Possible trainings at the end of the programme

This minor may be chosen by students studying a particular subject as a means of broadening their horizons and training in an interdisciplinary issue. It may also be used as a preliminary stage towards the 120 credit Master in Population and Development Studies.
