

WORKSHOP 1

Part 1: Start-up meeting February 22, 2002 at Louvain-la-Neuve

A first scientific meeting of the network took place on February 22, 2002, at the Institute of Statistics at the UCL. This one-day meeting consisted of presentations, one for each work package (see the programme below). Each presentation aimed at explaining to all members of the network the main issues that will be studied in each package, as well as the links with items in other work packages. Each presentation involved a few speakers, talking on closely-related issues and giving as such a nice global view on the various aspects of the problems to be studied. From this one-day meeting it became clear that there is an enormous potential to fruitful joint work on the research project. The many lively discussions during the meeting were a simple illustration of this. About 65 people participated at this meeting. Among these a lot of young researchers affiliated to the institutions of the network.
