## UCL LBIR1130 Université catholique de Louvain

## Introduction to Earth sciences

2012-2013

6.0 credits

45.0 h + 30.0 h

2q

Teacher(s) :	Dufey Joseph ; Sonnet Philippe (coordinator) ;
Language :	Français
Place of the course	Louvain-la-Neuve
Main themes :	The course views Earth as a system of interacting components which, as scientists increasingly realize, is subject to interference with mankind. Throughout the course, these interacting components put into the context of plate tectonics, which serves as framework connecting geologic phenomena.
	The course consists in three activities: 1. Lectures in classes, based on the textbook " Understanding Earth ", 4th edition, by F. Press, R. Siever, J. Grotzinger and Th. Jordan, ed. Freeman & Co. Lectures follow the outline of the textbook and use its illustrations.
	<ol> <li>Practical lab work of mineral and rock identification, topographical and geological map interpretation.</li> <li>One field trip (half day) to observe rocks outcrops as well as to introduce to various stratigraphic, geomorphologic, pedologic and cartographic aspects.</li> </ol>
	The course includes the following subjects (chapter numbering is that of the textbook and missing chapter numbers correspond to chapters of the textbook that will not be seen during the course).
	Chapitre 1 : Building of planet Earth Chapitre 2 : Plate tectonics, the unifying theory
	Chapitre 3 : Minerals, building blocks of rocks
	Chapitre 4 : Rocks, records of geologic processes
	Chapitre 5 : Igneous rocks, solids from melts
	Chapitre 6 : Volcanism Chapitre 7 : Weathering and erosion
	Chapitre 8 : Sediments and sedimentary rocks
	Chapitre 10 : The rock record and the geologic time scale
	Chapitre 12 : Mass wasting
	Chapitre 13 : The hydrologic cycle and groundwater
	Chapitre 14 : Streams, transport to the oceans
	Chapitre 15 : Winds and deserts
	Chapitre 16 : Glaciers, the work of ice.
	Chapitre 19 : Earthquakes
	Chapitre 20 : The evolution of the continents
	Chapitre 21 : Exploring Earth's interior
	The course is taking place in two parts. The first part, given during the first half of the second quadrimester includes chapters 1 to 6 and 19 to 20. The second part, during the second half of the second quadrimester includes chapters 7 to 16. Students undertaking a science bachelor in physics and mathematics do not attend the second part of the course. They are exempted from participating to the practical laboratory exercises by must take part to the field trip. The course can also be chosen in part or as a whole by students from another faculty as part of their minor, since it is a course intended to provide a general scientific culture open to any student having completed its secondary studies.
Aims :	At the end of the course, the student will have acquired the knowledge every scientist should have about earth sciences, whatever its future specialisation. Basing on what he has learned about the functioning of the Earth as a system, the student will be able to develop reasoned approach toward its manifold consequences on our society: evolution of natural resources, environmental changes, prediction of natural risks, place of Life and Mankind in the history and evolution of the "space craft" we inhabit, etc. Through to laboratory practical training, the student will know how to identify minerals and rocks, how to read a geological map and,
	after one half day of excursion in the field, how to apply a few elementary principles to the observation rock and their relationship with relief and land use.
	For the student who chooses studies leading to the degree of Bioengineer, this course represents a first introduction to the environmental sciences as it explores the physical context for Life on Earth (vegetal, animal or human). He will find in the course, the practical trainings and in the field excursion, the basic pieces of information which are crucial for apprehending the physical context of his practical training placement.
	The student in chemistry, physics, mathematics, biology and geography will be able to acquire, through the various topics which will be developed during the course, a first idea about some of the methods of scientific reasoning that are specific to geology compared to other scientific disciplines. Whatever specialisation the student chooses, the course will increase the student's awereness of several domains in which he might play a role during his professionnal life.

## Université Catholique de Louvain - COURSES DESCRIPTION FOR 2012-2013 - LBIR1130

	<ul> <li>Section in Fourier Junction and Management</li> <li>Bachelor in Motor skills : General</li> <li>Bachelor in Human and Social Sciencess</li> <li>Bachelor in Political Sciences: General</li> <li>Bachelor in Political Sciences: General</li> <li>Bachelor in Mathematics</li> <li>Bachelor in History</li> <li>Bachelor in Biomedicine</li> <li>Bachelor in Religious Studies</li> <li>Bachelor in Chemistry</li> <li>Bachelor in Chemistry</li> <li>Bachelor in Engineering : Architecture</li> <li>Bachelor in Computer Science</li> <li>Bachelor in Physics</li> </ul>
	<ul> <li>Bachelor in Economics and Management</li> <li>Bachelor in Motor skills : General</li> <li>Bachelor in Human and Social Sciences</li> <li>Bachelor in Sociology and Anthropology</li> <li>Bachelor in Political Sciences: General</li> <li>Bachelor in History of Art and Archaeology : General</li> <li>Bachelor in Mathematics</li> <li>Bachelor in History</li> <li>Bachelor in Biomedicine</li> <li>Bachelor in Religious Studies</li> <li>Bachelor in Chemistry</li> <li>Bachelor in Chemistry</li> <li>Bachelor in Engineering : Architecture</li> <li>Bachelor in Computer Science</li> <li>Bachelor in Engineering</li> </ul>
	<ul> <li>Bachelor in Economics and Management</li> <li>Bachelor in Motor skills : General</li> <li>Bachelor in Human and Social Sciences</li> <li>Bachelor in Sociology and Anthropology</li> <li>Bachelor in Political Sciences: General</li> <li>Bachelor in History of Art and Archaeology : General</li> <li>Bachelor in Mathematics</li> <li>Bachelor in History</li> <li>Bachelor in Biomedicine</li> <li>Bachelor in Religious Studies</li> <li>Bachelor in Chemistry</li> <li>Bachelor in Chemistry</li> <li>Bachelor in Engineering : Architecture</li> <li>Bachelor in Computer Science</li> </ul>

	<ul> <li>&gt; Bachelor in Economics and Management</li> <li>&gt; Bachelor in Motor skills : General</li> <li>&gt; Bachelor in Human and Social Sciences</li> <li>&gt; Bachelor in Sociology and Anthropology</li> </ul>
	> Bachelor in Economics and Management > Bachelor in Motor skills : General
	> Bachelor in Economics and Management
	> Bachelor in Psychology and Education: General
2	> Bachelor in Philosophy > Bachelor in Pharmacy
	> Bachelor in Information and Communication
study :	> Master [120] in History of Art and Archaeology : General
Cycle and year of	> Bachelor in Bioengineering Master [220] in Littler of Att and Archeeology (Constal)
	on geography. The questions about the course represent 13 out of the 20 points of the final grade. They can be multiple choice more open questions. For instance, the students might be asked to justify their answer, a definition may be asked, or the quest might be based on a figure or a map from the textbook. For questions that are not multiple-choice, a wrong answer or no ans represent zero point. The questions about geography represent 2 out of 20 points of the final note. There are 10 questions will consist in indicating on a blank world map with country limits (downloadable on the course Web site) such geographic feature such as: countries, seas, oceans, islands, straits, peninsulas and main deserts, plateaus or regions. The necessary knowledge this exercise should be acquired by the students trough personal work, as it corresponds to general geographic culture.
Other infos :	assistance to the field trip. The exam of theory is a written exam. It comprises two parts: questions about the course and quest on geography. The guestions about the course represent 13 out of the 20 points of the final grade. They can be multiple choic
	mineral identification (scheduled during the class period and not during the exam period), on assignments about cartography and
	properties for identifying the most common rocks and minerals. Grading The practical exercises are graded and they make for 5/20 points of the final grade. The grade of the practical exercises will be based on a practical exam of consisting in rock
	animations. During practical training, lab notes will be provided to the students: they contain, among others, the determina
	Sonnet and J. Dufey, which includes, among others, the slides show presented during the courses, an introduction to the geo of Belgium, a set of pictures of the geological and geomorphological features observed during the field trip as well as additi
