Evaluation of Agricultural Policies

3.0 credits

30.0 h

Teacher(s) : Henry de Frahan Bruno ; Language : Anglais Place of the course Louvain-la-Neuve Inline resources: iCampus Micro-economics (e.g., LBIR1242 Principes d'économie), introduction to econometrics (e.g., LECGE1316 or LINGE1221 Prerequisites : Econométrie) and Microsoft Excel. Economic models for policy analysis: Demand and supply models, Household models, Market and multi-market models, Trade Main themes : models, Computable general equilibrium models. Most illustrations are drawn from recent agricultural and trade policy reforms. With respect to the learning outcomes of the Bio-engineering in agricultural sciences, this course contributes to the following main Aims : learning outcomes: 1.3 - 1.4: model selections 2.1 - 2.5: model specifications, techniques and programming 3.4 - 3.6: model design, simulation, interpretation and practices 4.4: model design and specifications By the end of the course, students are able to: know and understand common applied methods for policy analysis in both partial and general equilibrium settings, design simple econometric and mathematical models to analyse economic policies under various hypothesis and scopes as well as recognise their limitations, bridge their microeconomic theory to policy analysis, be better prepared to assist policy decision makers. The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit". Written examination, mainly syntheses and exercises Evaluation methods : Teaching in class room and several applications in computer room. Teaching methods : 1. Government interventions and their evaluation Content : 2. Demand analysis The profit function approach to supply and factor demand 3. 4. Supply response: expectations formation and partial adjustment 5. Agricultural household models 6. Price distortions: indicators and partial equilibrium analysis Multimarket models: principles and applications 7. General equilibrium theory 8. 9. National account data and social accountancy matrix 10. Design and use of computable general equilibrium models Teacher's textbook, complementary publications, slide shows and overheads available on iCampus. Bibliography : Recommended textbook Sadoulet Elisabeth and Alain de Janvry. Quantitative Development Analysis, Johns Hopkins University Press, Baltimore, 1995. Course taught in English with most material in English and some in French. Other infos : > Master [120] in Agricultural Bioengineering Cycle and year of > Advanced Master in Rural Economics and Sociology study : AGRO Faculty or entity in charge:
