

3.0 credits

20.0 h + 10.0 h

2q

Teacher(s) :	Elens Laure ;
Language :	Français
Place of the course	Bruxelles Woluwe
Main themes :	The objective of this course is to give a basic knowledge in the statistical data processing related with the biomedical domain. The course also deals with how computer software, in particular JMP (SAS) can be used to present and analyze data.
Aims :	This course is designed to introduce the students to the statistical and methodological issues applied to problems in the biomedical sciences and to avoid the common pitfalls in data analysis. <i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i>
Content :	<p>Introduction to statistical methodology.</p> <p>Summarizing and presenting data in tables and graphs</p> <ul style="list-style-type: none"> <li>- Extract and organize electronically stored data</li> <li>- Produce useful graphical and numerical summaries</li> </ul> <p>Univariate statistics</p> <ul style="list-style-type: none"> <li>- Descriptive aspect (median, standard deviation, variance, interval of confidence)</li> <li>- Validation aspect (test on normality of distribution, discordance tests on outliers, precision, accuracy)</li> <li>- Significance tests: type 1 and type 2 errors</li> <li>- Capability analysis</li> </ul> <p>Bivariate analysis: one-way and two-way ANOVA</p> <ul style="list-style-type: none"> <li>- Descriptive aspect: multiple box-plot, means or medians</li> <li>- Validation aspects: normal distribution of residuals, detection of outliers.</li> <li>- Significance tests: type 1 (t test, Tukey test or Dunnett test) and type 2 (power test).</li> </ul> <p>Linear regression model</p> <ul style="list-style-type: none"> <li>- Parameter determination.</li> <li>- Validation aspect: limit of detection and quantification.</li> <li>- Inverse prediction</li> </ul> <p>Non-linear regression</p> <ul style="list-style-type: none"> <li>- Kinetic models</li> <li>- Michaelis-Menten and Hill models</li> <li>- Pharmacokinetic models</li> <li>- Dissolution models</li> </ul> <p>MANOVA and repeated measures analysis of variance</p> <p>Multivariate statistical methods:</p> <p>Logistic regression and ROC curves</p> <p>Survival analysis</p> <p>Exercises with statistical software (JMP)</p> <ul style="list-style-type: none"> <li>- Use of an intranet site to illustrate the course (slides, JavaScript illustrations, summary) and the exercises (exercises, solutions to exercises, tables of statistics).</li> <li>- Connections with clinical and biomedical applications.</li> </ul>
Other infos :	<p>Prerequisites: mathematical and basic statistical notions.</p> <p>Evaluation based on the treatment or the discussion of examples issued from the scientific literature in the medical or pharmaceutical field.</p> <p>Staff: 1 professor /20 students for the practical exercises.</p> <p>Teaching aided with computer, practical exercises with statistical software JMP</p>
Cycle and year of study :	<p>&gt; <a href="#">Master [120] in Biomedicine</a></p> <p>&gt; <a href="#">Master [120] in Pharmacy</a></p>
Faculty or entity in charge:	FARM
