Teacher(s) :	
Language :	Français
Place of the course	Bruxelles Woluwe
Main themes :	The course includes three introductory lessons, a hospital stay as nurse auxiliary for one week and two observations of a half day in primary care. Five seminars are organized in group and a short synthesis by the student is required.
Aims :	<p>General objective : The goal of the course of introduction to medical practice is to promote in the medical student a vision of medicine centered on the patient cared for by a health network with a multidisciplinary approach. Specific objectives : At the end of the formation, the student will have :</p> <p>1-Acquired a better understanding of the pathway leading to the identification and recognition of the health problems of the individual in his familial and social environment. 2-Acquired a better understanding of the experience of "being sick" and of its consequences on quality of life and on social insertion. 3-Acquired a better understanding of "primary health care" and of the importance of this level of services and health care for the patient, the health personnel and the society. 4-Acquired a better understanding of the hospital care system and of the health care network around the patient. 5- Developed his qualities for observing and analysing the health need felt and expressed, and the offer of services and health care proposed in response to this need. 6- Proved his capacity for a critical analysis of this experience and personal evolution during the education.</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
