Content :	Analysis and comparison of city characteristics and morphology, from the origins to the industrialisation age. Antiquity makes it possible to examine the combination of space sacralisation with its political ownership. The Middle Ages combine perpetuation and deletion of the ancient heritage. The Renaissance is situated between reason and utopia, nourished from one another, and lays the foundations for an autonomous urbanistic thought. The industrial Revolution will give rise to modern urbanism marked by the partial, intellectual and affective rejection of the traditional city conceptions, the triumph of technique and the development of new utopias.
