

4.0 credits	22.5 h	1q
-------------	--------	----

Teacher(s) :	G�rard Jean-Marc ; Lopez Val David ;
Language :	Anglais
Place of the course	Louvain-la-Neuve
Main themes :	<p>This course provides a general introduction to the concept and techniques of Quantum Field Theory. Emphasis is given to the connection to Classical and Quantum Mechanics and its applications to different fields, from Optics to Condensed Matter and Particle Physics. The Syllabus is complementary to Relativistic Quantum Mechanics and Quantum Field Theory II and lays out the mathematical formalism used in Elementary Particle Physics, Fundamental Interactions, as well as in the more advanced optional courses.</p> <p>P { margin-bottom: 0.21cm; }</p> <p>Introductory topics</p> <ul style="list-style-type: none"> 1.1 Motivation. Historical perspective. 1.2 Many-Particle Classical and Quantum Mechanics. 1.3 Classical Field Theory. 1.4 Second Quantization. Non-relativistic Quantum Field Theory. 1.5 Relativistic Classical Field Theory. The Klein'Gordon field. <p>2. Field quantization</p> <ul style="list-style-type: none"> 2.1 Canonical Quantization. Scalar field theory. 2.2 The Electromagnetic Field: classical equations. Normal modes. 2.3 The Electromagnetic Field: Canonical Quantization. Polarization. Coherent states. 2.4 Field Quantization in the presence of charges. Interactions. Quantum Electrodynamics. Single'photon events. <p>3. Applications</p> <ul style="list-style-type: none"> 3.1 Quantum effects in the vacuum. Casimir effect. Lamb shift. 3.2 Anomalous magnetic moments. 3.3 Scattering of light. 3.4 Atomic transitions. Spontaneous and stimulated emission. Lasers. <p>4. More advanced topics</p> <ul style="list-style-type: none"> 4.1 Aspects of symmetry. The Brout'Englert'Higgs mechanism. 4.2 Topological solutions.
Aims :	<i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i>
Evaluation methods :	<p>P { margin-bottom: 0.21cm; }</p> <p>--</p> <p>Weekly assignment (60%) ' one problem sheet to be worked out and delivered within a week.</p> <p>--</p> <p>Final project & mp; oral presentation (40%).</p> <p>--</p> <p>The final grade can be lifted to reflect class participation, improvement and effort.</p>
