

4.0 credits	22.5 h + 22.5 h	2q
-------------	-----------------	----

Teacher(s) :	Craeye Christophe ; Janvier Danielle ; Vandendorpe Luc ;
Language :	Français
Place of the course	Louvain-la-Neuve
Inline resources:	http://icampus.uclouvain.be/claroline/course/index.php?cid=LFSAB1508
Main themes :	<p>The project is linked to the courses of the major orientation ELEC: devices and electronic circuits, telecommunication, electromagnetism, automatic, control of electrical systems.</p> <p>Examples of systems and existing data will be chosen among information systems, electrical transducers, spectral analysis of real signals including noise, hardware (circuits and systems) and software implementation(signal processing, real time), etc.</p>
Aims :	<p>Contribution of the course to the program objectives</p> <p>Regarding the learning outcomes of the program of Bachelor in Engineering, this course contributes to the development and the acquisition of the following learning outcomes:</p> <ul style="list-style-type: none"> ' LO 1.1, 1.2 ' LO 2.6, 2.7 ' LO 4.6 <p>Specific learning outcomes of the course</p> <p>The skills addressed by « Project 4 » include on one hand transverse skills, common to all projects 4, and on the other hand disciplinary, technical skills that are specific to each engineering specialty.</p> <p>Transversal learning outcomes:</p> <p>Projects 4 aim at providing students with transversal skills close to the practice of engineering jobs within a multi-disciplinary context :</p> <ul style="list-style-type: none"> ' analyse and improve existing systems ; ' analyse experimental data with a critical mind ; ' make the distinction between reality and models used to describe or modify it ; ' deal with the notion of uncertainty in the project approach, its conception and the obtained results. <p>The project will allow for a trial-and-error approach, typically adopted by young engineers at the beginning of their careers.</p> <p>Disciplinary learning outcomes:</p> <p>At the end of the course, students will have increased their knowledge in</p> <ul style="list-style-type: none"> ' electromagnetic modelling of the transmission channel, ' signal processing and estimation of parameters in noise, ' microwave circuits. <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Evaluation methods :	<p>Students will be evaluated both orally in group and individually through a written examination (organised simultaneously for all Projects 4) on the basis of the above mentioned objectives. An evaluation grid is provided at the beginning of the course.</p> <p>Students present and defend their project in front of a jury composed of all teachers, completed by other tutors having contributed to the project supervision.</p>
Teaching methods :	Work in small groups with a tutor, 2 or 3 milestones with interim presentations by the students
Content :	<p>Discover and understand the concept of Ultra Wide Band (UWB) and the geolocation methods using time of arrival</p> <p>Understand and justify the presence of the various components of the emitter and receiver transmission (RF source, DC block, mixer, low noise amplifier, noise figure, antennas, propagation channel, oscilloscope, etc.)</p> <p>Estimation of the channel and time of arrival (maximum likelihood estimator, cross correlation, Cramer-Rao Bound (CRB), etc.)</p> <p>Estimation of the position (direct localization, trilateration, Time-of-Arrival technique (TOA) and time-difference-of-arrival (TDOA)</p> <p>Calculation of statistics: mean, variance, bias and distribution (estimation of time-of-arrival, position, channel model, etc.)</p> <p>Impact of multiple reflections on the received signal, using panels of different materials</p>
Other infos :	<p>This course is part of the set of courses « Project 4 » of the programme of bachelor in engineering. Projects 4 share common transversal objectives, but exist under different versions oriented towards specific disciplinary objectives, corresponding to the majors/minors of the programme. Each student chooses either the project related to his/her major or to his/her minor (if available).</p>
Faculty or entity in charge:	ELEC
