

LMECA1451

2016-2017

Mechanical manufacturing.

|--|

Teacher(s):	Delannay Laurent ; Simar Aude ;				
Language :	Français				
Place of the course	Louvain-la-Neuve				
Inline resources:	> http://moodleucl.uclouvain.be/enrol/index.php?id=8095				
Main themes :	Molding of metals				
	Machining processes				
	Extrusion and molding of polymers				
	Polymer-based composite materials				
	Powder metallurgy				
	Metal forming - extrusion and drawing (incl. wire drawing) - rolling, bending, stamping and deep drawing - forging				
	Hardening and surface treatments				
	Assembly processes (incl. welding and pasting)				
Aims :	Regarding the common AA references of the program "Masters degree in Mechanical Engineering", this course contributes to the development, the acquisition and the evaluation of the following learning outcomes:				
	AA1.1, AA1.2, AA1.3				
	AA2.1, AA2.2, AA2.3, AA2.4				
	AA3.1				
	AA5.4				
	AA6.1, AA6.2, AA6.3 More precisely, at the end of the course, students will be able to:				
	identify and justify the choice of a manufacturing process that is best suited to produce a commonly used object.				
	explain, based on the knowledge of the underlying physical phenomena, the influence of a manufacturing process on the mechanical properties of the final product.				
	explain the main challenges of each manufacturing process as well as the existing technological solutions. At the end of the course, students will have a first experience of				
	machining of metal parts in a mechanical manufacturing workshop,				
	experimental techniques used to characterize stiffness, hardening, hardness and toughness in a mechanical testing laboratory. The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".				
Evaluation methods :	Evaluation of the student personal involvement during the lab sessions (15%) and written exam assessing the learning outcomes (85%).				

Teaching methods:	lectures (introduced with practical problems),					
	lecture notes written in French by the teachers (English reference book available),					
	solution of exercises in smaller groups,					
	laboratories in groups of 3 or 6 students,					
	videos showing processes that are not presented in the lab sessions.					
Content :	Basics of solid mechanics - Physics underlying deformation					
	- Mathematical description of stresses and strains					
	- Mechanical constitutive laws					
	- Failure processes					
	Physical basis of the mechanical strength of materials					
	- Cristalline structure of metals					
	- Defects of the cristal lattice					
	- Grain size, texture, recovery and recristallization					
	- Strengthening of alloys					
	Molding of metals					
	- Underlying physics					
	- Practical questions raised					
	- Technological solutions					
	Machining processes					
	- Mechanics of the cut					
	- Cutting conditions					
	- classification of the processes and machining machines					
	Metallic joining					
	- Welding					
	- Adhesion					
	Metal forming					
	- Forging					
	- Extrusion and drawing of long products					
	- Rolling of flat products					
	- Secondary sheet metal forming					
	Surface treatments and coatings					
	- Mechanical surface treatments					
	- Hot dipping - Surface coating					
	- Surface Coating - Electrodeposition					
	- Conversion treatment					
	- Vapor deposition					
	- Diffusion treatment					
	Manufacturing of polymers					
	- Physics of polymers					
	- Extrusion of thermoplastics and elastomers					
	- Molding of thermosets					
	- Polymer-based composites					
	Sintering and additive manufacturing					
	- Powder metallurgy					
	- Production of ceramic pieces by powder metallurgy					
	- Additive manufacturing					
Bibliography :	Lecture notes written in French by the teachers. Two main references (not mandatory):
