Language : Français Place of the course Louvain-la-Neuve Prerequisites : The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet. Main themes : The course presents the main neuropsychological semiotics in the areas of cognition such as memory, executive functions, attention, gnoeise, praxia and language. The course will offer an introduction to the examination methods and theoretical work of disorder interpretation (cognitive approach of disorders), as well as an illustration of the approach of management. The chapters covered in this course are: • Memory: definition, semiology, elopathogenesis, interpretative models • Attention: definition, semiology, elopathogenesis, interpretative models • Attention: definition, semiology, elopathogenesis, interpretative models • Language: Definition, semiology, elopathogenesis, interpretative models • Attention: definition, semiology, elopathogenesis, interpretative models • Language: Definition, semiology, elopathogenesis, interpretative models • Attention: definition, semiology and classification of aphasis, interpretative models • Attention: definition, semiology and classification of aphasis, interpretative models • Attention: definition, semiology and classification of aphasis, interpretative models • Attention: definition, semiology and classification of aphasis, interpretative models • Attention: definition, semiology and classification of aphasis, in	Teacher(s) :	Pillon Agnesa ; Samson Dana ; Edwards Martin ;				
Prerequisites : The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet. Main themes : The course presents the main neuropsychological semiotics in the areas of cognition such as memory, executive functions, attention, gnoises, praxia and language. The course will offer an introduction to the examination methods and theoretical work of disorder interpretation (cognitive approach of disorders), as well as an illustration of the approach of management. The chapters covered in this course are: - Memory: definition, semiology, etiopathogenesis, interpretative models Executive functions: definition, semiology, etiopathogenesis, interpretative models - Attention: definition, semiology, etiopathogenesis, interpretative models Language: Definition, semiology, etiopathogenesis, interpretative models - Attention: definition, semiology, etiopathogenesis, interpretative models Airms : At the end of this course, the student must be able to master the theoretical and methodological knowledge that can identify the neuropsychological disorders present in an individual and to analyze the underlying causes. In the light of the learning outcomes framework, the course is aimeting students to: A: Master knowledge that helps explain and understand an individual, group, or organization. A2. Critically analyse and model a situation (individual, group, or organization) B: Master knowledge of interventions to improve a given situation (individual, group, or organization). E2. Identify the contribution and added value of scientific research in psy	Language :	Français				
Intervention are specified at the end of this sheet. Main themes : The course presents the main neuropsychological semiotics in the areas of cognition such as memory, executive functions, attention, gnosies, praxis and language. The course will offer an introduction to the examination methods and theoretical work of disorder interpretation (cognitive approach of disorders), as well as an illustration of the approach of management. The chapters covered in this course are: • Memory: definition, semiology, etiopathogenesis, interpretative models • Oncosis: • Executive functions: definition, semiology, etiopathogenesis, interpretative models • Concis: • Definition, semiology, etiopathogenesis, interpretative models • Concis: • Definition, semiology, etiopathogenesis, interpretative models • At the end of this course, the student must be able to master the theoretical and methodological knowledge that can identify the neuropsychological disorders present in an individual and to analyze the underlying causes. In the light of the learning outcomes framework, the course is aimed primarily at getting students to: A1. Master knowledge that helps explain and understand an individual, group, or organization. A2. Critically analyse and model a situation (individual, group, or organization). E2. Identify the contribution and added value of scientific research in psychology and the sciences of education on its understanding of given situations. The course is of the programme(s) can be accessed at the end of this sciencing unit? A1. Master knowledge of interventions to improve a	Place of the course	Louvain-la-Neuve				
Attention, gnosies, praxis and language. The course will offer an introduction to the examination methods and theoretical work of disorder interpretation (cognitive approach of disorders), as well as an illustration of the approach of management. The chapters covered in this course are: • Memory: definition, semiology, etiopathogenesis, interpretative models • Executive functions: definition, semiology, etiopathogenesis, interpretative models • Attention: definition, semiology, etiopathogenesis, interpretative models • Language: Definition, semiology, etiopathogenesis, interpretative models • Attention; definition, semiology, etiopathogenesis, interpretative models Aims: At the end of this course, the student must be able to master the theoretical and methodological knowledge that can identify the neuropsychological disorders present in an individual and to analyze the underlying causes. In the light of the learning outcomes framework, the course is aimed primarily at getting students to: A1. Master knowledge that helps explain and understand an individual, group, or organization. A2. Critically analyse and model a situation (individual, group, or organization). Second, this course aims to get students to: B1. Master knowledge of interventions to improve a given situation (individual, group, or organization). E2. Identify the contribution and added value of scientific research in psychology and the sciences of education on its understanding of given situations. The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet,	Prerequisites :					
- Memory: definition, semiology, etiopathogenesis, interpretative models - Executive functions: definition, semiology, etiopathogenesis, interpretative models - Attention: definition, semiology, etiopathogenesis, interpretative models - Consia: Definition, semiology, etiopathogenesis, interpretative models (Language: Definition, semiology, etiopathogenesis, interpretative models - Praxies: Definition, semiology, etiopathogenesis, interpretative modelsAims :At the end of this course, the student must be able to master the theoretical and methodological knowledge that can identify the neuropsychological disorders present in an individual and to analyze the underlying causes. In the light of the learning outcomes framework, the course is aimed primarily at getting students to: A1. Master knowledge that helps explain and understand an individual, group, or organization. A2. Critically analyse and model a situation (individual, group, or organization). E2. Identify the contribution and added value of scientific research in psychology and the sciences of education on its understandan gor given situations. The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".Other infos :This course assumes that the student has mastered the course content LPSP1001 General Psychology, LPSP1207 Introduction to Cognitive Neuroscience and LPSP1208 Neuropsychology, or equivalent.Faculty or entity inEPSY	Main themes :	attention, gnosies, praxis and language. The course will offer an introduction to the examination methods and theoretical work of disorder interpretation (cognitive approach of disorders), as well as an illustration of the approach of management.				
Attention: definition, semiology, etiopathogenesis, interpretative models - Gnosia: Definition, semiology, etiopathogenesis, interpretative models - Language: Definition, semiology, etiopathogenesis, interpretative models - Praxies: Definition, semiology, etiopathogenesis, interpretative modelsAims :At the end of this course, the student must be able to master the theoretical and methodological knowledge that can identify the neuropsychological disorders present in an individual and to analyze the underlying causes. In the light of the learning outcomes framework, the course is aimed primarily at getting students to: A1. Master knowledge that helps explain and understand an individual, group, or organization. A2. Critically analyse and model a situation (individual, group, or organization). E2. Identify the contribution and added value of scientific research in psychology and the sciences of education on its understanding of given situations. The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".Other infos :This course assumes that the student has mastered the course content LPSP1001 General Psychology, LPSP1207 Introduction to Cognitive Neuroscience and LPSP1208 Neuropsychology, or equivalent.		- Memory: definition, semiology, etiopathogenesis, interpretative models				
- Language: Definition, semiology and classification of aphasia, interpretative modelsAims :- Yraxies: Definition, semiology, etiopathogenesis, interpretative modelsAims :At the end of this course, the student must be able to master the theoretical and methodological knowledge that can identify the neuropsychological disorders present in an individual and to analyze the underlying causes. In the light of the learning outcomes framework, the course is aimed primarily at getting students to:A1. Master knowledge that helps explain and understand an individual, group, or organization.A2. Critically analyse and model a situation (individual, group, or organization) with reference to psychological theories, research findings, methods and tools.Second, this course aims to get students to:B1. Master knowledge of interventions to improve a given situation (individual, group, or organization).E2. Identify the contribution and added value of scientific research in psychology and the sciences of education on its understanding of given situations.The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".Gother infos :This course assumes that the student has mastered the course content LPSP1001 General Psychology, LPSP1207 Introduction to Cognitive Neuroscience and LPSP1208 Neuropsychology, or equivalent.Faculty or entity inEPSY		- Attention: definition, semiology, etiopathogenesis, interpretative models				
Anns .neuropsychological disorders present in an individual and to analyze the underlying causes. In the light of the learning outcomes framework, the course is aimed primarily at getting students to: A1. Master knowledge that helps explain and understand an individual, group, or organization. A2. Critically analyse and model a situation (individual, group, or organization) with reference to psychological theories, research findings, methods and tools. Second, this course aims to get students to: B1. Master knowledge of interventions to improve a given situation (individual, group, or organization). E2.
