Q2

Teacher(s)	Delmelle Pierre coordinator ;Opfergelt Sophie ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	The course provides a first introduction to Earth sciences from a geological perspective; the other three main disciplines of the Earth (astronomy, oceanography and meteorology) are not included. The course describes the composition of Earth materials, the internal structure of the planet, the geological processes active at depth (internal processes) and at the surface (external processes), how rocks are formed and how they represent the archives of Earth's past. The course considers the Earth as a set of subsystems interacting with each other and which are influenced by life. Throughout the course, these subsystems and their interactions are placed in the general frame of plate tectonics which serves as the guiding principle for the course.
Aims	<i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i>
Evaluation methods	<p>The exam consists of three parts, which are used to evaluate if the student has acquired the learning outcomes.</p> <p>1) A written exam with questions about the course and questions about geography. The questions about the course represent 12 of the 20 points of the final grade. They may be in the form of MCQ (multiple choice questions) or open-ended questions where the response must be justified and where definitions may be required. They may also be based on a diagram or on a map taken directly from the manual. Questions about geography represent two of the 20 points of the final grade. There are ten questions of geography. They consist in locating with a number on a blank world map with country borders (available on the course website) various geographic features such as: countries, seas, oceans, islands, straits, peninsulas, deltas, mountain ranges, vast deserts, plateaus or physical regions, excluding rivers, lakes and cities. Students must acquire by themselves the knowledge necessary for this exercise of general geographic culture.</p> <p>2) Exercises to do individually online via iCampus, including the use of Google Earth, some of which are graded (representing one of the 20 points of the final grade).</p> <p>3) During the labs, an oral exam of minerals and rocks is organized. In addition, the graphical works (reading topographic maps and geological maps) are graded. The combined total for these lab practical represent 5 of the 20 points of the final grade.</p>
Teaching methods	<p>The course consists of three activities:</p> <ol style="list-style-type: none"> 1. Presentations in the classroom, based on the textbook "Understanding Earth." Lectures follow the general structure of the manual and use the illustrations in it. 2. Labs of mineral and rock identification and reading of topographic and geological maps. 3. Home assignments to complete online via iCampus, including the use of Google Earth. The exercises are presented during the course and the solutions are discussed at the next course. A new assignment is proposed every two to three weeks.
Content	<p>1. <u>Contents</u></p> <p>The course includes the following topics:</p> <p>NB: The headings and numbering are those of the textbook "Understanding Earth" adopted for the course. Missing numbers correspond to chapters of the textbook that are not taught in the course.</p> <p>Chapter 1: The Earth System</p> <p>Chapter 2: Plate Tectonics: The Unifying Theory</p> <p>Chapter 3: Earth Materials: Minerals and Rocks</p> <p>Chapter 4: Igneous Rocks: Solids from Melts</p> <p>Chapter 5: Sedimentation: Rocks Formed by Surface Processes</p> <p>Chapter 8: Clocks in Rocks: Timing in the Geologic Record</p> <p>Chapter 9: Early History of the Terrestrial Planets</p> <p>Chapter 10: History of the Continents</p> <p>Chapter 11: Geobiology: Life Interacts with Earth</p> <p>Chapter 12: Volcanoes</p> <p>Chapter 13: Earthquakes</p> <p>Chapter 14: Exploring Earth's Interior</p> <p>Chapter 16: Weathering, Erosion and Mass Wasting: Interactions Between the Climate System and Plate Tectonic Systems</p> <p>Chapter 17: The Hydrologic Cycle and Groundwater</p>

	<p>Chapter 18: Stream Transport: From Mountains to Oceans Chapter 19: Winds and Deserts Chapter 21: Glaciers: The Work of Ice <u>Complementary explanations</u> The course is divided into two parts. The first part, during the first half of the second quadrimester, covers chapters 1, 2, 3, 4, 9, 10, 11, 12, 13 and 14. The second part, during the second half of the second quadrimester, covers chapters 5, 8, 16, 17, 18, 19, and 21. Students who wish to attend only the first part of the course as part of their minor must choose the LBIR1130A course. In this case, they are exempted from the labs.</p>
<p>Inline resources</p>	<p>Moodle</p>
<p>Bibliography</p>	<p>Le cours s'appuie sur le manuel Understanding Earth de J. Grotzinger et Th. Jordan, sixième édition, W.H. Freeman & Co, 2010. L'acquisition du manuel est obligatoire pour pouvoir suivre le cours et donne droit à l'achat de la traduction en français du manuel à la DUC. Cette traduction est partielle et ne couvre que les parties principales des chapitres faisant partie du cours. Son acquisition est réservée aux étudiants qui ont acquis au préalable le manuel. Un système de rachat de manuels usagés en fin d'année a été mis en place par la DUC.</p> <p>Les montages PowerPoint projetés lors des séances de cours sont disponibles sur le site iCampus (auquel l'inscription est obligatoire) afin de permettre à l'étudiant qui a suivi le cours de retrouver chez lui la succession des figures projetées au cours. Outre la succession des images du montage PowerPoint, le site iCampus du cours renferme des documents complémentaires dont la lecture est conseillée, une introduction à la géologie de la Belgique, des animations ou des logiciels se rapportant à la matière du cours ou des travaux pratiques et des références à des sites Web dont la consultation peut aider l'étudiant dans son étude, notamment le site du manuel « Understanding Earth » qui comporte des questionnaires d'auto-évaluation.</p> <p>Lors des travaux pratiques, un fascicule est distribué aux étudiants. Il comporte les critères pratiques d'identification des roches et des minéraux.</p>
<p>Other infos</p>	<p>If a student is taking or has already completed the LBIR1130 course (or its abridged LBIR1130A version) and wants to take as optional courses another course in Earth Sciences (LGEO1251), the student's academic advisor as well as the contact teachers should be warned to establish a special program to compensate any overlap between the various topics covered by the courses or the labs. This particular program may take, for example, the form of an additional personal project.</p>
