Q1

Teacher(s)	Blondel Vincent ;Delvenne Jean-Charles ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	Introduction to the language and theory of graphs : questions of characterization, isomorphism, existence and enumeration. Properties of directed and undirected graphs such as connectivity, planarity, k-colorability and the property of being Eulerian, perfect, etc. Modelling of practical problems : data structures and algorithms for the exploration of graphs. Basic graph algorithms and an analysis of their complexity.
Aims	<p>AA1 : 1,2,3 More precisely, by the end of the course the student will be able to :</p> <p>1</p> <ul style="list-style-type: none"> • model various problems in the language of graph theory • identify if a graph-theoretic problem has a known efficient algorithmic solution or not • propose and apply an algorithm to solve such a problem, at least for some classes of graphs • prove in a clear and rigorous fashion elementary properties related to the concepts covered in the course <p>----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Evaluation methods	The students are evaluated individually through a written exam based on the specific objectives described above.
Teaching methods	The course is organized in lessons and supervised exercise sessions.
Content	Structure and characterization of graphs - basic concepts - degree, connected components, path, cycle, cut, minor, etc. Classes of graphs and their recognition - perfect, series parallel, planar graphs, acyclic digraphs, etc. Exploration of graphs and tests of their properties - k-connected, eulerian, etc. Flows - theorems of Menger and Hall, maximum flow and minimum cost flow algorithms and their complexity. Problems : finding optimal matchings and stable sets, the travelling salesman problem, cut, graph partitioning and graph colouring problems
