

5 credits	30.0 h	Q2
-----------	--------	----

Teacher(s)	Lebichot Bertrand ;
Language :	English
Place of the course	Mons
Main themes	<p>The main themes for this course are the following:</p> <ul style="list-style-type: none"> • Dimensionality reduction methods: Principal Component Analysis, Singular Value Decomposition and Multidimensional Scaling • Kernel methods for classification and regression • Bayesian networks and graphical models • Markov models and hidden Markov model • Reinforcement Learning <p>Those themes are complementary to those presented in MLSMM2151 'Data Mining'.</p>
Aims	<p>With respect to the LSM competency framework. This course contribute to acquiring the following competencies:</p> <p><u>Knowledge and reasoning</u></p> <ul style="list-style-type: none"> • Mastery of the core knowledge for each area of management. • Ability to communicate one's acquired knowledge from the various areas of management. • Ability to properly apply one's acquired knowledge in order to solve problems. <p><u>A scientific and systematic approach</u></p> <p>1</p> <ul style="list-style-type: none"> • Clear, structured, analytical reasoning based on applying, and if needed adapting, scientifically-based conceptual frameworks and models to define and analyse a problem. • Collecting, selecting and analysing relevant information using rigorous, advanced and appropriate methods. <p>At the end of this course, the student will be able to:</p> <ul style="list-style-type: none"> • Understand and describe the main methods used in Machine Learning. • Apply dimensionality reduction techniques, when required. • Determine the most relevant methods to use for a given learning problem. • Apply those methods on real-life learning problems. <p>-----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Evaluation methods	Oral examination based on learning outcomes.
Teaching methods	<ul style="list-style-type: none"> • Lectures; • Practical sessions integrated to those lectures.
Content	<p>Nowadays, the volume of data generated, for instance by internet and social networks, is constantly increasing. On the other hand, there is a great need for efficient ways to infer useful information from those data, which can take different forms. Numerous data mining, machine learning and pattern recognition algorithms were developed in order to predict information for different applications. This course is devoted to some of those techniques, emphasizing on dimensionality reduction, Kernel and Bayesian models and some graph related methods.</p>
Inline resources	Course notes will be available on https://moodleucl.uclouvain.be/
Faculty or entity in charge	CLSM
