

5 crédits	30.0 h	Q1
-----------	--------	----

Enseignants	Van Belleghem Sébastien ;
Langue d'enseignement	Anglais
Lieu du cours	Louvain-la-Neuve
Préalables	Mathematics and Statistics for Economists
Thèmes abordés	<p>The course must cover the basic most important topics of econometric theory at an advanced level. These themes concern econometric model formulation, estimation and testing. Teaching is at an advanced level. Proofs of important results are covered, though not systematically. Applications are also used so that students learn how to carry applications in their own research.</p> <p>Contents</p> <ul style="list-style-type: none"> <li>• Linear regression : exact finite sample theory of ordinary and generalized least squares</li> <li>• Large-sample theory: convergence concepts, stochastic processes (stationarity and ergodicity, IID and white noise, martingales, martingale difference sequences) and limit theorems for IID and MDS). Application to large sample theory of least-squares estimation.</li> <li>• GMM and the method of instrumental variables</li> <li>• The method of maximum likelihood: (estimation and testing) and its application to linear regression and non-linear regression models.</li> <li>• Empirical applications. Use of an econometric and simulation/computational software.</li> </ul>
Acquis d'apprentissage	<p>The purpose is that students acquire the basic tools of econometric research which are of general use in more specialized fields of research and which are covered in subsequent courses (Microeconometrics and Econometrics of Time-Series). An example of such a tool is the method of estimation by maximum likelihood.</p> <p>1</p> <p>-----</p> <p><i>La contribution de cette UE au développement et à la maîtrise des compétences et acquis du (des) programme(s) est accessible à la fin de cette fiche, dans la partie « Programmes/formations proposant cette unité d'enseignement (UE) ».</i></p>
Modes d'évaluation des acquis des étudiants	Oral or written exam. A part of the final result is reserved for the evaluation of the exercises assigned during the term.
Méthodes d'enseignement	Lectures, take-home exercises (theory-based, and empirical using econometric software)
Contenu	<p>Contents</p> <ul style="list-style-type: none"> <li>• Linear regression : exact finite sample theory of ordinary and generalized least squares</li> <li>• Large-sample theory: convergence concepts, stochastic processes (stationarity and ergodicity, IID and white noise, martingales, martingale difference sequences) and limit theorems for IID and MDS). Application to large sample theory of least-squares estimation.</li> <li>• GMM and the method of instrumental variables</li> <li>• The method of maximum likelihood: (estimation and testing) and its application to linear regression and non-linear regression models.</li> <li>• Empirical applications. Use of an econometric and simulation/computational software.</li> </ul>
Bibliographie	<ul style="list-style-type: none"> <li>• A textbook like Hayashi Econometrics</li> </ul>
Autres infos	Support: A textbook like Hayashi Econometrics
Faculté ou entité en charge:	ECON

<b>Programmes / formations proposant cette unité d'enseignement (UE)</b>				
Intitulé du programme	Sigle	Crédits	Prérequis	Acquis d'apprentissage
Master [120] en sciences économiques, orientation économétrie	ETRI2M	5		
Master [120] en sciences économiques, orientation générale	ECON2M	5
