

3 credits	30.0 h	Q2
-----------	--------	----

Teacher(s)	Hantson Philippe ;
Language :	French
Place of the course	Bruxelles Woluwe
Main themes	The lessons are focusing on the important concept of target organ. The basis of the presentation will be the experience accumulated from the management of acutaly poisoned patients (drug overdoses). For each main organ (brain, heart, lung...), the topic will be introduced by a clinical case. From the clinical manifestations, the pathophysiology will be discussed in depth. Criteria of severity will be defined for the most common toxins. Treatment will also be discussed, with a critical analysis of the use of the antidotes. In addition to the adverse effects of drugs, other aspects of environmental toxicology will be covered : exposures to toxic plants, animals, gases... Some illustrative situations are described (Seveso, nephrotoxicity due to herbal remedies).
Aims	<i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i>
Evaluation methods	The evaluation is made with a questionnaire with multiple choise questions and open questions.
Content	content method : The following chapter's will be illustrated by clinical case : <ul style="list-style-type: none"> - Epidemiology of drug poisoning - Pharmaco and toxicokinetics and toxicodynamics - Toxins inducing central nervous system disturbances : drug and illicite substance - Toxic causes of metabolic acidosis - Mechanisms of cardiotoxicity - Paracetamol-induced liver failure - Toxicity due to animals and plants - Carbon monoxide and cyanide poisoning
Faculty or entity in charge	SBIM
