

Au vu du contexte sanitaire lié à la propagation du coronavirus, les modalités d'organisation et d'évaluation des unités d'enseignement ont pu, dans différentes situations, être adaptées ; ces éventuelles nouvelles modalités ont été -ou seront- communiquées par les enseignant·es aux étudiant·es.

5 crédits	30.0 h + 30.0 h	Q2
-----------	-----------------	----

Enseignants	Delannay Laurent ;Simar Aude ;
Langue d'enseignement	Anglais
Lieu du cours	Louvain-la-Neuve
Préalables	This is an advanced course about the mechanics of materials which is addressed to students having prior knowledge about continuum mechanics, linear theory of thermo-elasticity in three dimensions (tensor representation) as well as some basics of materials science (mechanical properties of amorphous and crystalline materials.)
Thèmes abordés	The course presents different mathematical models used by engineers in order to describe the mechanical response of deformable materials as well as their ability to sustain crack extensions. Each model is motivated from the physics and adaptations are suggested in order to account for non-linearity under finite strains, anisotropy of composite materials as well as the influence of temperature, environment and strain rate on the mechanical response. A systematic procedure is presented in order to select materials with optimized mechanical properties.
Acquis d'apprentissage	<p>At the end of the course, students will be able :</p> <ul style="list-style-type: none"> • to solve basic problems using models allowing to predict mechanical responses of materials involving (hyper)elasticity and (visco)plasticity under finite strains as well as crack propagations, • to explain the physics underlying each model and the link between microstructure and macroscopic mechanical properties, • to explain the origin of various phenomena including anisotropy of composite materials, elastic spring back and necking of plastically deformed samples, residual stresses and creep. • to select a material with the best combination of mechanical properties based on the definition of performance indices, <p>According to the classification of LO in the EPL programme, this activity contributes to the development and acquisition of the following LO:</p> <p>LO1.1, LO1.2, LO1.3, LO2.1, LO2.2, LO2.4, LO5.3, 5.4, 5.6</p> <ul style="list-style-type: none"> • LO1 Foundations of scientific and technical knowledge (LO1.1, LO1.2, LO1.3) • LO2 Engineering skills (LO2.1, LO2.2, LO2.5) • LO3 R & D skills (LO3.2) • LO5 Efficient communication (LO5.3) • LO6 Ethics and professionalism (LO6.1, LO6.3) <p>-----</p> <p><i>La contribution de cette UE au développement et à la maîtrise des compétences et acquis du (des) programme(s) est accessible à la fin de cette fiche, dans la partie « Programmes/formations proposant cette unité d'enseignement (UE) ».</i></p>
Modes d'évaluation des acquis des étudiants	En raison de la crise du COVID-19, les informations de cette rubrique sont particulièrement susceptibles d'être modifiées. The final exam will assess both the level of understanding of theoretical concepts and the student's skills to solve practical exercises. Students will be graded while accounting also for the outcome of their project.
Méthodes d'enseignement	En raison de la crise du COVID-19, les informations de cette rubrique sont particulièrement susceptibles d'être modifiées. The course will involve lectures, practical exercises, mechanical testing in the laboratories and as well as PBL in small groups.
Contenu	<p>The course will cover the following topics :</p> <ul style="list-style-type: none"> • Materials selection procedure to achieve desired mechanical properties (material classes, performance indices) • Complements of linear thermo(visco)elasticity : phase partitioning of strain and stress in composite materials (incl. eigenstrains and anisotropy) • Contact stresses • Plasticity and viscoplasticity (yield surface, J2 theory, elastic springback, dynamic loading, creep)

	<ul style="list-style-type: none">• Finite strains (hyperelasticity, plastic spin)• Linear elastic fracture mechanics + influence of microstructure on toughness- Fatigue
Bibliographie	<ul style="list-style-type: none">• Lecture notes written by the teachers
Faculté ou entité en charge:	MECA
