

In view of the health context linked to the spread of the coronavirus, the methods of organisation and evaluation of the learning units could be adapted in different situations; these possible new methods have been - or will be - communicated by the teachers to the students.

4 credits	30.0 h	Q2
-----------	--------	----

Teacher(s)	Bitzer Sonja ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	<p>The introduction to forensic science will address the history and development of the discipline, as well as its relationship to criminology. The overall process, that is, from crime scene to trial, will be presented by considering the trace as its central element.</p> <p>The second part focuses on the diversity of traces found on a crime scene; from anthropometric traces, to traces from people and objects, and physicochemical and biological traces, without neglecting digital traces. All types of traces will be examined for their nature, characteristics, specificity, search methods, sampling and analysis. Finally, the interpretation of the analysis results will be studied through the likelihood ratio of Bayes' theorem.</p> <p>The last part focuses on the integration of traces in the Belgian judicial system. The focus is therefore on the laws in force concerning the application of scientific methods in the service of the judicial procedure as well as the status of forensic expert in the legal sense.</p>
Aims	<i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i>
Evaluation methods	Due to the COVID-19 crisis, the information in this section is particularly likely to change. Written exam
Content	Introduction to the foundations of forensic science, recognised as science in itself, with a particular focus on the intrinsic reasoning processes of this discipline. Initiation of a critical thinking process in regards to the holistic process from the collection of traces at the crime scene to their use at court level, by reviewing the investigation methods, the different types of traces, their analysis techniques and their integration in the investigation and the judicial system.
Inline resources	Moodle
Faculty or entity in charge	ECRI
