

In view of the health context linked to the spread of the coronavirus, the methods of organisation and evaluation of the learning units could be adapted in different situations; these possible new methods have been - or will be - communicated by the teachers to the students.

5 credits

30.0 h + 15.0 h

Q2

Teacher(s)	Haine Luc ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	Compact Riemann surface theory and its applications to integrable systems.
Aims	<p>1</p> <p>----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Evaluation methods	<p>Due to the COVID-19 crisis, the information in this section is particularly likely to change.</p> <p>Assessment is made on the basis of an oral presentation during the teaching sessions and an oral examination at the end of the class. The oral presentation during the teaching sessions consists in presenting a chapter in a book, or a research article offering new perspectives. The oral examination at the end of the semester tests the knowledge and the ability to use the concepts and the theorems viewed during the class.</p>
Teaching methods	<p>Due to the COVID-19 crisis, the information in this section is particularly likely to change.</p> <p>During the classes, students are invited to actively participate, by asking questions based on their previous knowledge of basic complex analysis and basic differential geometry.</p>
Content	<p>In 2019-2020, the course will address the main theorems of compact Riemann surfaces with applications to integrable systems.</p> <p>1. Compact Riemann surfaces:</p> <ul style="list-style-type: none"> - Riemann-Roch theorem - Abel's theorem - Jacobi varieties, Jacobi inversion problem and theta functions <p>2. Applications to integrable systems (theory of solitons):</p> <ul style="list-style-type: none"> - Baker-Akhiezer functions - Equations of the theory of solitons
