

Due to the COVID-19 crisis, the information below is subject to change, in particular that concerning the teaching mode (presential, distance or in a comodal or hybrid format).

2 credits

15.0 h + 15.0 h

Q1

Teacher(s)	Decamps Sandrine ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	<p>The major concern of the course is to locate various technologies within a problematic framework which subordinates the teaching "tools" to the objectives of the teaching training process. On the basis of example (Web sites, cederoms, softwares ...) extracted from various contexts and various disciplines, the following topics will be reviewed: techniques of multi-media and the Internet, a typology of technological tools for learning and teaching and their associated practices, pedagogical models for the development and the integration of the NTIC in education, the use of the NTIC in various teaching methods. One will also underline the interest of the technological approach in the steps of resolution of problems coming from various disciplines and in the development of transverse competences in learning (use of the bureautic software, for example). In the exercises, a very detailed attention will be given to the construction, the use and the exploitation of evaluation grids for each quoted technology and in their teaching uses.</p>
Aims	<p>Objectives At the end of this course, the student will be more able - to understand new information and communication technologies (ICT: audio-visual, multimedia, networks, Internet tools...), - to determine their teaching possibilities and their limits, - to describe teaching setups integrating these tools, - to evaluate the impacts of them (cognitive, relational, emotional...) on the training and finally to estimate their various costs.</p> <p>1 T The integration of these technologies in the mechanisms of teaching and training will be particularly underlined. The more specific objective of the optional exercises will relate to the evaluation of the tools and the teaching setups in terms of competences that one wishes to develop.</p> <p>-----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Teaching methods	<p><b>Due to the COVID-19 crisis, the information in this section is particularly likely to change.</b></p> <p>Flipped Classrooms; learning-by-doing; peer instruction; peer evaluation</p>
Content	<p>Methods The course (the first 7 weeks) will be built around various talks illustrated "on line" (handling of the images, construction of Internet sites...) with a sufficient time for exchanges with the audience. For the optional exercises (7 last weeks), a formula of "mini-conference" (and teamwork) will be proposed. The students there will look further into a topic (analyzing software, educational sites, innovating devices...) and will present the results of their work "as a pleinière".</p>

<p>Other infos</p>	<p>Others informations The course in itself does not require prerequisites; the examples will be selected in various disciplines. With regard to the course, the exams will relate to the comprehension of the technical and teaching concepts seen in the course and to the analysis of a teaching situation integrating the technological tool. The evaluation of the exercises will relate to a thorough work of analysis, development and presentation of "products" and "situations" as well on the level of the techniques used as on the developed competences and the integration in teaching. Others elements Demonstrations (on computer or in video) will be organized within each course in order to show operations of the various aspects approached by the courses "in real dimension".
