

Due to the COVID-19 crisis, the information below is subject to change, in particular that concerning the teaching mode (presential, distance or in a comodal or hybrid format).

4 credits	30.0 h + 20.0 h	Q2
-----------	-----------------	----

Teacher(s)	Clotman Frédéric (compensates Knoops Bernard) ;Gofflot Françoise ;Knoops Bernard ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	<p>The course covers several aspects of the development of the nervous system and the complex brain functions of mammals. The course also covers the study of neurological disorders, neurodegenerative pathologies and the regenerative mechanisms of the nervous system.</p> <p>The course begins with an in-depth study of the development of the nervous system in mammals, including rodents and humans. Certain neurodevelopmental disorders will be discussed. Complex brain functions involving associative cortical areas, speech production and comprehension, control of biological rhythms, emotions and memory will also be studied. Finally, various major neurodegenerative pathologies including Parkinson's disease, Alzheimer's disease, amyotrophic lateral sclerosis will be addressed as well as regeneration mechanisms involving stem cells and axonal regeneration in the nervous system of adult mammals.</p>
Aims	<ul style="list-style-type: none"> <li>• understand and describe the fundamental processes underlying the development of the mammalian central nervous system ;</li> <li>• identify and describe the molecular actors involved and their signalling pathways</li> <li>• demonstrate an understanding of the general principles of complex brain functions studied in the course ;</li> <li>• understand and describe the characteristics and molecular mechanisms involved in the different pathologies studied;</li> <li>• understand, describe and discuss the neurodegenerative mechanisms and regenerative processes of the adult mammalian nervous system.</li> <li>• analyse and comment on an article from the recent scientific literature related to the topics covered during the ex cathedra course, seminars and reverse classes.</li> </ul> <p>-----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Bibliography	<p>Ouvrages de référence :</p> <ol style="list-style-type: none"> <li>1. Neurosciences (Purves <i>et al.</i>, éditions de Boeck).</li> <li>2. Psychobiologie (Breedlove <i>et al.</i>, éditions de Boeck)</li> </ol> <p>Articles de la littérature récente</p>
