

Due to the COVID-19 crisis, the information below is subject to change, in particular that concerning the teaching mode (presential, distance or in a comodal or hybrid format).

4 credits	30.0 h + 15.0 h	Q2
-----------	-----------------	----

Teacher(s)	Page Melissa ;Soumillion Patrice ;
Language :	English
Place of the course	Louvain-la-Neuve
Prerequisites	<i>The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.</i>
Main themes	Main themes to cover : Introduction to metabolism Bioenergetics Biochemical transport phenomenon Main metabolic ways : Glycolysis and hexose catabolism Metabolism of glycogen and glycogeneogenesis Oxidation of fatty acids and biosynthesis of lipids Krebs cycle Electron transport, oxidative phosphorylation Metabolism of amino acids, nucleotides and linked molecules. Main ways of regulation. The exercises are divided into two complementary parts : One, followed in the case of CHIM BAC, consists of practical work on a specific question in biochemistry. The other, for all, consists of preparing, presenting and discussing, in groups, a question linked to a biochemical problem, but voluntarily carrying onto other disciplines of life sciences.
Aims	<i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i>
Evaluation methods	Due to the COVID-19 crisis, the information in this section is particularly likely to change. Written exam including questions requiring precise / short answers, theoretical developments or problem solving. The student presentations are also part of the overall assessment as well as the laboratory sessions (except part A).
Teaching methods	Due to the COVID-19 crisis, the information in this section is particularly likely to change. The skills targeted by the course will be developed using lectures. Students will give a presentation on a topic to choose from a list of topics proposed by teachers. Laboratory sessions for chemistry students are not part of Part A for students in biology and veterinary science.
Content	Bioenergetic principles; carbohydrate metabolism (glycolysis, fermentation, phosphogluconate pathway, gluconeogenesis and glycogenogenesis); Krebs cycle and glyoxylate; respiratory chain and oxidative phosphorylation; photosynthesis; oxidation and biosynthesis of lipids; urea cycle; synthesis and degradation of amino acids and other important nitrogen compounds; nucleotide metabolism. Instruction will take place in english.
Inline resources	Slideshows are available via the moodle platform
Bibliography	<ul style="list-style-type: none"> • Lehninger Principles of biochemistry 7th edition • Voet & Voet Biochemistry 4th Edition <p>Le cours ne fait appel à aucun support particulier qui serait payant et jugé obligatoire. Les manuels ci-dessus sont recommandés (mais pas obligatoires) sur une base facultative pour un apprentissage plus approfondi</p>
Faculty or entity in charge	CHIM
