

Due to the COVID-19 crisis, the information below is subject to change, in particular that concerning the teaching mode (presential, distance or in a comodal or hybrid format).

5 credits	30.0 h + 22.5 h	Q1
-----------	-----------------	----

Teacher(s)	Henrotte François (compensates Remacle Jean-François) ;Remacle Jean-François ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	<ul style="list-style-type: none"> Numerical methods for solving non-linear equations Numerical methods for solving linear systems : iterative methods Numerical methods for solving eigenvalue and eigenvector problems Numerical solution of ordinary differential equations : initial value problems
Aims	<p>With respect to the AA reference, this course contributes to the development, acquisition and evaluation of the following learning outcomes :</p> <p>AA1.1, AA1.2, AA1.3 AA2.1, AA2.4 AA5.2, AA5.3, AA5.5</p> <p>More precisely, after completing this course, the student will have the ability to :</p> <p>1</p> <ul style="list-style-type: none"> Analyze in depth the various key methods and algorithms for the numerical solution of important classes of problems from science and industry, related to applied mathematics Better understand the numerical behavior of the various numerical algorithms for the solution of linear as well as nonlinear problems Implement these methods in a high level computer language and verify their numerical behavior on a practical problem <p>Transversal learning outcomes :</p> <ul style="list-style-type: none"> Collaborate in a small team to solve a mathematical problem using numerical methods <p>-----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Evaluation methods	<p>Due to the COVID-19 crisis, the information in this section is particularly likely to change.</p> <p>Exam (50% of the grade) and homeworks (50% as well)</p>
Teaching methods	<p>Due to the COVID-19 crisis, the information in this section is particularly likely to change.</p> <ul style="list-style-type: none"> Classes organized following the EPL guidelines. Homeworks done individually A more detailed organization is specified each year in the course plan provided on Moodle.
Content	<ul style="list-style-type: none"> Reminder of the basic notions of linear algebra (linear spaces, vector and matrix norms, ...) Floating point calculations. Stability, precision and conditioning of algorithms. QR and SVD factorizations. Linear systems of equations : direct methods. LU, Choleski, Pivoting, Renumbering (RCMK), direct resolution of sparse systems, Fill-in. Iterative methods (Krylov subspaces) : iteration of Arnoldi, conjugate gradients, GMRES, Lanczos. Preconditioning of iterative methods, preconditioned conjugated gradients. Computing eigenvalues, QR algorithm
