

Due to the COVID-19 crisis, the information below is subject to change, in particular that concerning the teaching mode (presential, distance or in a comodal or hybrid format).

5 credits	30.0 h + 15.0 h	Q1
-----------	-----------------	----

This biannual learning unit is not being organized in 2020-2021 !

Teacher(s)	Caprace Pierre-Emmanuel ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	
Aims	<p>1</p> <p>----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Evaluation methods	<p>Due to the COVID-19 crisis, the information in this section is particularly likely to change.</p> <p>Assessment is by an examination during the exam session on one hand, and by projects during the semester on the other hand. The examination tests knowledge and understanding of fundamental concepts, examples and results, ability to construct a coherent argument, and mastery of the techniques of proof introduced during the course.</p>
Teaching methods	<p>Due to the COVID-19 crisis, the information in this section is particularly likely to change.</p> <p>The course is taught through lectures and practical exercises. In the practical exercise sessions, students will be asked to make suggestions and formulate ideas in order to further the course on the basis of their prior knowledge.</p>
Content	<p>This course aims at introducing some of the fundamental concepts from the theory of groups. A special emphasis is put on finitely generated infinite groups, and their study by geometric methods.</p> <p>The following themes will be discussed, starting from concrete examples.</p> <ul style="list-style-type: none"> • Abelian, nilpotent and soluble groups. • Simple groups. • Free groups and groups acting on trees. • Gromov hyperbolic groups. • Linear groups and residual finiteness. • The Burnside Problem.
