

Due to the COVID-19 crisis, the information below is subject to change, in particular that concerning the teaching mode (presential, distance or in a comodal or hybrid format).

5 credits	37.5 h + 22.5 h	Q2
-----------	-----------------	----

Teacher(s)	Crucifix Michel ;Fichet Thierry ;
Language :	French
Place of the course	Louvain-la-Neuve
Prerequisites	<i>The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.</i>
Main themes	General characteristics of the atmosphere; thermodynamics of dry air and moist air; static stability of the atmosphere; atmospheric dynamics; atmospheric heat gains and losses; large-scale atmospheric mean flows; air masses, fronts and synoptic weather systems; weather forecasting; regional climatic processes; climate changes.
Aims	<p>1 To acquire the basic notions of meteorology needed to understand the main atmospheric phenomena and weather forecasting as well as some additional training in climatology.</p> <p>-----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Evaluation methods	Due to the COVID-19 crisis, the information in this section is particularly likely to change. Oral exam with written preparation (75% of the final mark). Homework (25% of the final mark). If the sanitary conditions deteriorate, the modalities of teaching and examination will be reassessed according to the situation and the rules in force.
Teaching methods	Due to the COVID-19 crisis, the information in this section is particularly likely to change. Theoretical lectures in classroom. Tutored practicals. Commented visit of the Wing Meteo of the Belgian Air Force (Beauvechain). Homework: analysis of a particular meteorological situation.
Content	<ol style="list-style-type: none"> 1. The atmosphere 2. Thermodynamics of dry air 3. Thermodynamics of moist air and saturated air 4. Condensation processes 5. The vertical equilibrium in the atmosphere 6. Reminders and complementary notions of mechanics 7. The wind 8. Heat inputs in the atmosphere 9. The general circulation of the atmosphere 10. Air masses and their evolution 11. Weather systems
Inline resources	The slides projected during the lectures are available on MoodleUCL.
