LTECO2200A (Régis Burnet) Apocalypse and collapsology: what the anxiety of the end of the world has to say</p> <p>Over the last few years, many people have been thinking that the end of the world is approaching. Global warming, demographic pressure, the belief that the capitalist system is running out of steam: there are many arguments to support the certainty of the collapse. Some have even proposed a new "science," collapsology, to study and predict the timing and form of the final disaster.</p> <p>However, in the history of humanity, in many epochs, people thought to be close to the end of the world. Each time, this anguish was a mirror of the evolution of society and its mentalities.</p> <p>What does the current catastrophist trend tell us? Starting from the study of ancient doctrines—first of all the study of the Apocalypse of John, which still plays a fundamental role in the apocalyptic scenario—we will examine contemporary works, in particular the zombie film, in order to know which social changes and which alterations in world perception are reflected by this psychosis of breakdown.</p> |
