2020

Due to the COVID-19 crisis, the information below is subject to change, in particular that concerning the teaching mode (presential, distance or in a comodal or hybrid format).

3 credits	30.0 h + 7.5 h	Q1

Teacher(s)	Hermans Emmanuel ;Mingeot Marie-Paule ;
Language :	French
Place of the course	Bruxelles Woluwe
Prerequisites	*The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.*
Main themes	The following chapters are covered: Pharmacodynamics: theoretical concepts and experimental approaches. Qualitative and quantitative characterization of the interaction of drugs with their molecular targets in order to predict their biological effects on simple models or on the whole organism. Systematic study of the main inter and intracellular chemical signaling pathways governing the functioning of the organism. Systematic study of pharmacological targets (receptors, ion channels, enzymes). Basic notions of general pharmacotherapy: main principles of the study of drug activity and study of the risks related to pharmacological treatments.
Aims	1 At the end of this teaching entity, the student will have acquired knowledge of the basic concepts in pharmacology: 1. He will be able to define the main targets of the drugs and understand the methods used to determine their activity. 2. He will have an integrated vision of intracellular signaling pathways. 3. He will be able to understand the multiplicity of targets used or usable in pharmacology. 4. He will dispose of general notions concerning the use of medicinal products in human medicine and in particular the principle of studies leading to their validation. The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled 'Programmes/courses offering this Teaching Unit'. - - - - *The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".*
Evaluation methods	**Due to the COVID-19 crisis, the information in this section is particularly likely to change.** Oral examination. The student is allowed to individually prepare the exam before the oral examination.
Teaching methods	**Due to the COVID-19 crisis, the information in this section is particularly likely to change.** Teaching is based on lectures (total of 30 hours) and practical work in laboratory (7.5 hours)
Content	- General pharmacodynamics: mechanisms of action of drugs; Quantitative study of the relationship between receptor binding and pharmacological response; Basic concepts on the identification, classification and regulation of receptors. - General pharmacotherapy: therapeutic index; Tolerance and drug dependence; side effects; Drugs interactions; Clinical evaluation of drugs: placebo effect, clinical trials. - Systematic description of pharmacological targets at the molecular level and their implications in various pathophysiological processes The teaching is essentially based on the exploration of a large number of notions specific to pharmacology. Beyond a descriptive theoretical course, the notions are developed through concrete examples.
Bibliography	Le support : l'essentiel des documents présentés aux cours sont accessibles sur Internet via la plateforme Moodle accessible aux membres de la communauté universitaire.
Faculty or entity in charge	MDEN
