

5.00 crédits	30.0 h + 30.0 h	Q2
--------------	-----------------	----

Enseignants	Bartosiewicz Yann ;Duponcheel Matthieu ;
Langue d'enseignement	Anglais
Lieu du cours	Louvain-la-Neuve
Préalables	Students are expected to master the following skills: the basics of Continuum mechanics, as they are covered within the course LMECA1901, the basics of Thermodynamics, as they are covered within the course LMECA1855, and the basics of Fluid mechanics and heat transfer, as they are covered within the course LMECA1321
Thèmes abordés	This course presents the physics of heat and mass transfer phenomena and the tools used by engineers to compute transfers in practical applications. The course complements to the prerequisite knowledge of conductive and convective heat transfer and presents the basis of radiative heat transfer and of mass transfer. The heat exchanger application is presented because of its importance in engineering and because it allows to familiarize the students with more complex heat transfer problems with combined heat transfer mechanisms.
Acquis d'apprentissage	<p><b>A la fin de cette unité d'enseignement, l'étudiant est capable de :</b></p> <p>In view of the LO frame of reference of the "Master Mechanical Engineering", this course contributes to the development, acquisition and evaluation of the following learning outcomes:</p> <p>LO1.1; LO1.2; LO1.3                      LO2.1; LO2.2; LO2.4; LO2.5                      LO3.2                      LO4.2; LO4.4                      LO5.3; LO5.4; LO5.5                      LO6.1; LO6.3</p> <p><b>Specific learning outcomes of the course</b></p> <p>At the end of this learning unit, the student is be able to:</p> <p>1</p> <ul style="list-style-type: none"> <li>• Identify the different heat transfer modes in complex situations</li> <li>• Understand the physics of heat and mass transfer phenomena</li> <li>• Establish thermal/mass balance equations</li> <li>• Compute, in simple geometries using analytical solutions or correlations, heat transfer                             <ul style="list-style-type: none"> <li>• by conduction</li> <li>• by convection; including phase change</li> <li>• by radiation between surfaces</li> </ul> </li> <li>• Compute, in simple geometries using analytical solutions or correlations, mass transfers in binary mixtures and related energy exchanges</li> <li>• Consider the use of numerical tools for complex geometries</li> <li>• Assess or design devices combining different heat and mass transfer mechanisms</li> </ul>
Modes d'évaluation des acquis des étudiants	<ul style="list-style-type: none"> <li>• Examen écrit (85%)</li> <li>• Laboratoire (15%)</li> </ul> <p>La participation au laboratoire est obligatoire. Les titulaires du cours pourront, en vertu de l'article 72 du Règlement général des études et examens, proposer au jury de s'opposer à l'inscription d'un-e étudiant-e qui n'aurait pas participé au laboratoire, lors de la session de juin ou de septembre.</p>
Méthodes d'enseignement	<ul style="list-style-type: none"> <li>• Cours magistraux</li> <li>• Séances d'exercices</li> <li>• Laboratoire</li> </ul>
Contenu	<ul style="list-style-type: none"> <li>• Eléments avancés de transfert de chaleur convectif et conductif</li> <li>• Echangeurs de chaleur</li> <li>• Ebullition et condensation</li> <li>• Transfert de chaleur radiatif</li> <li>• Transfert de masse</li> </ul>
