

3.00 credits

15.0 h + 15.0 h

Q1

Teacher(s)	Ponette Quentin ;
Language :	French
Place of the course	Louvain-la-Neuve
Prerequisites	Prerequisites: geomatics, ecology, silviculture, forest mensuration, forest economics and policy, management of habitats and species. Supplementary courses: environmental law, land planning.
Main themes	<p>1. Main concepts:</p> <ul style="list-style-type: none"> <li>- basic concepts of forest management: time, space, optimal felling ages/dimensions, normal forests, annual allowable cut;</li> <li>- steps in forest management: analysis, synthesis, implementation, follow-up/monitoring;</li> <li>- specification of forest management based on the type of society (forest, agricultural, industrial, post-industrial);</li> <li>- key management methods in temperate zones: uniform systems, selection system, irregular stands, conversion and transformation;</li> <li>- taking into account the production of social and environmental services (biodiversity, landscape, public hosting, ...);</li> <li>- development and management of forest formations in warm regions: tropical rainforests, other forest biomes, plantations, agro-forests and trees outside forests, analysis of context, approaches and techniques of planning and management, cross-cutting themes.</li> </ul> <p>The concepts related to the management of temperate forests are implemented in the companion course entitled 'Integrated project in forest and open habitat planning' LBIRF2212.</p>
Learning outcomes	<p><b>At the end of this learning unit, the student is able to :</b></p> <p>a. <u>Contribution de l'activité au référentiel AA (AA du programme)</u> M1.1, M1.2, M1.4, M1.5, M2.1, M2.2, M2.4, M6.1, M6.2, M6.4, M6.9, M8.5</p> <p>b. <u>Formulation spécifique pour cette activité des AA du programme (maximum 10)</u></p> <p>At the end of the course, students will have acquired the skills to:</p> <ol style="list-style-type: none"> <li>1 - master the concepts and methods involved in the different steps associated with the planning process of forests located in temperate and tropical regions - analysis, synthesis, implementation, follow-up;</li> <li>- select, analyze and synthesize data from diverse disciplines such as resource assessment, management, analysis of social and environmental impacts, etc.;</li> <li>- establish management plans at the forest ownership scale, integrating the constraints, risks and opportunities from various fields and stakeholders;</li> <li>- develop sound management decisions for tropical ecosystems, based on a deep understanding of their ecology and issues associated with them.</li> </ol>
Evaluation methods	<ul style="list-style-type: none"> <li>- written closed-book examination (2/3 of the total);</li> <li>- evaluation of a group work on the design and implementation of a monitoring system for a forest management plan at the ownership scale (1/3 of the total).</li> </ul>
Teaching methods	<ul style="list-style-type: none"> <li>- lectures including practical examples, case studies and active learning mini-activities;</li> <li>- seminars by stakeholders from the socio-professional and scientific spheres;</li> <li>- presentations by teams of students of a forest management case study, with discussions and feedback;</li> <li>- supervised analysis of a management plan of a public forest;</li> <li>- delineation of forest stands and parcels.</li> </ul>
Content	<p>Table of contents</p> <ul style="list-style-type: none"> <li>- context</li> <li>- management steps: analysis; synthesis; implementation; follow-up/monitoring</li> <li>- main management concepts: space-related concepts; time-related concepts; other concepts</li> <li>- silvicultural systems, silvicultural treatments et optimal felling age/dimension: general approach; classification of silvicultural treatments and management methods; determination of optimal felling ages and dimensions</li> <li>- management of evenaged forests: normal forest; regeneration cuttings and regeneration effort; groups; allowable cuts</li> </ul>

	<ul style="list-style-type: none"> <li>- management of irregular / unevenaged forests: particularities ; normal forest; allowable cuts; follow-up and control; conditions of application</li> <li>- stand conversion and transformation</li> <li>- multifunctional role of forests: historical context; legal context; institutional context; history of management methods</li> </ul>
Inline resources	Moodle
Bibliography	<p>Les supports de cours obligatoires (diapositives power point, documents de référence) sont mis à disposition de l'étudiant sur Moodle.</p> <p>Pour en savoir plus, l'étudiant pourra consulter utilement les ouvrages de référence suivants :</p> <ul style="list-style-type: none"> <li>- de Turckheim, B., Bruciamacchie, M. 2005. La futaie irrégulière. Théorie et pratique de la sylviculture irrégulière, continue et proche de la nature. Edisud, Aix-en-Provence, France, 286 p.</li> <li>- Dubourdieu, J. 1997. Manuel d'aménagement forestier. Gestion durable et intégrée des écosystèmes forestiers. Lavoisier Tec&amp;Doc, Paris, France, 243 p.</li> </ul>
Other infos	This course can be given in English.
