

3.00 credits

Q2

Language :	English
Place of the course	Autre site
Prerequisites	The following BNEN courses are a prerequisite <ul style="list-style-type: none"> • Nuclear Energy: Introduction • Nuclear Fuel Cycle
Main themes	<p>MOX and Th fuel</p> <ul style="list-style-type: none"> • Comparison of the physical properties of Pu and Th • Possible core designs with Th based fuel with high conversion factors • Pu-MOX fuel fabrication (MIMAS process) and fuel rod thermal-mechanical behaviour under irradiation • Pu-MOX impact on reactivity coefficients and safety issues • Th-MOX impact on reactivity coefficients and overview of the possible safety issues • <p>Radiochemistry</p> <ul style="list-style-type: none"> • Applied radiochemistry (complementary to the course under "Nuclear Fuel cycle"): chemical process technology: radiochemical separation techniques, radiochemical analysis, production of radionuclides • Radionuclide migration through a clay host rock ' geochemistry and underlying phenomena: impact on the Safety Case; geochemistry in Boom Clay; role of organic matter; radionuclide speciation, sorption and transport; modelling. <p>Dismantling, decommissioning</p> <ul style="list-style-type: none"> • Introduction: definitions, objectives, levels, regulatory aspects, radioprotection, ALARA • Radionuclide inventory, characterization and measurements • Strategy for decontamination of buildings, concrete pieces and structures, metals • Dismantling of a nuclear reactor (the BR3 case): the experience, materials management • Other types of installations to be decommissioned, REX from other projects • Strategies and planning of decommissioning
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <p>MOX and Th fuel</p> <p>To get a global understanding of the utilization of Pu and Th based fuel in light water reactors:</p> <ul style="list-style-type: none"> • The challenges of the U-Pu-MOX fuel regarding the fuel fabrication, the core and fuel neutronic aspects and fuel behaviour • The Th-Pu-MOX used in LWR for its breeding capabilities, or more realistically as matrix for Pu utilization. <p>¹</p> <p>Radiochemistry and Dismantling</p> <ul style="list-style-type: none"> • To get an understanding of radiochemistry, as it is a basic discipline to understand the various stages and activities in the nuclear fuel cycle, including the safe disposal of the radioactive waste. • To get acquainted with the principles and practice of dismantling and decommissioning of nuclear materials, as this is becoming an activity of increasing importance in nuclear engineering.
Evaluation methods	Oral examination; written preparation
Inline resources	https://www.sckcen.be/fbnen
Bibliography	The PowerPoint presentations of the lectures are available on the BNEN website.

Other infos	<p>This course is part of the Advanced Master programme in nuclear engineering organized by the Belgian Nuclear Higher Education Network (BNEN). BNEN is organised through a consortium of six Belgian universities and the Belgian Nuclear Research Centre, SCK-CEN and takes place at the SCK-CEN in Mol.</p> <p>Prof. Pierre Van Iseghem ' Université de Liège Prof. Hubert Druenne ' Université de Liège</p>
Faculty or entity in charge	EPL
