

Teacher(s)	Hinojosa Valencia Leonith (compensates Legrand Vincent) ;Legrand Vincent ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	This part of the course aims to examine the role that social, economic, political and cultural factors play in the geopolitics of natural resources and development and is organized in two sections. Drawing on concepts from Political Ecology, Ecological Economics and Development Studies, the first section provides the foundations to understand the main topics that explain the geopolitics of natural resources and its implications for sustainable development. The interplay of these topics is illustrated by a review of socio-environmental conflicts observed in and development strategies pursued by low and medium-income countries. The second section analyses the developmental possibilities, risks and threats arising out of the current distribution and management of natural resources, notably land and water, in relation to food security and sustainable agriculture. This section discusses the policy and institutional options that countries from the Global South can pursue in order to influence the global governance of natural resources.
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <p>After completing this part of the course students will:</p> <ul style="list-style-type: none"> • Be knowledgeable of the main concepts of Political Ecology, Ecological Economics and Development Studies that underpin the geopolitics of natural resources. • Be able to critically discuss the relationship between the access, distribution and control of natural resources and development outcomes from an inter-disciplinary perspective. • Be able to analyse natural resources policy with focus on land and water. <p>In addition to developing analytical skills, students are expected to strengthen their capacity for team work, essay-writing and oral presentation by integrating knowledge from multiple disciplines and approaches to development.</p>
