

Méthodes d'enseignement	The class consists of lectures (30h) and exercise sessions (15h)
Contenu	<p>The course outline is as follows:</p> <ul style="list-style-type: none"> • Part I: <ul style="list-style-type: none"> • Basics of one-dimensional function optimization. Special case: the likelihood function. • Global vs local optima; numerical convergence and approximation errors. • Challenges of optimizing multi-dimensional functions. Special cases: linear and generalized linear models and computing the multivariate normal density (link with LSTAT2120, 2100, 2110, 2040). • Newton's method, Fisher scoring and IRLS. • Non-linear functions and numerical differentiation. • Case study: ?optim(), ?nlm(), ?deriv() and friends. • The EM algorithm. Special cases: missing data, normal mixture models and linear mixed models (link with LSTAT2210). • Part II: <ul style="list-style-type: none"> • Setting up controlled simulation studies: competitor selection, performance metrics and reproducibility. • Sampling from distributions and DGPs. • Case study I: Sample mean (mean, median, trimmed mean from normal and skewed distributions); German tank problem (estimators from slide LSTAT 2040) - mean, bias, MSE, RE. • Case study II: t-test (size, power, coverage and length for CIs) and Binomial test (Tables from slides LSTAT 2040). • Case study III: GLM variable selection (TPR, FPR, FDR). • Parallel computing in R: doParallel, foreach, mclapply and friends to illustrate Case study I-III. • Part III: <ul style="list-style-type: none"> • Bootstrap and resampling methods. • Bias and variance approximation based on resampling. • Bootstrap confidence intervals and hypothesis testing. • Other techniques: Permutation tests and Jackknife

Faculté ou entité en charge:	LSBA

Programmes / formations proposant cette unité d'enseignement (UE)				
Intitulé du programme	Sigle	Crédits	Prérequis	Acquis d'apprentissage
Master [120] en science des données, orientation statistique	DATS2M	5		
Master [120] en statistique, orientation biostatistiques	BSTA2M	5		
Master [120] en statistique, orientation générale	STAT2M	5		
Certificat d'université : Statistique et science des données (15/30 crédits)	STAT2FC	5
