| Evaluation methods                                                                                                                                                                                                                                                                                               | <ul> <li>The examination is organized during the examination session. It is a closed-book written examination.</li> <li>The timetable of the examination is scheduled by the AGRO Faculty secretariat.</li> <li>The examination is organized, by default, in French. Students who wish to do so may take the examination in English. In the latter case, the student requests permission to conduct the exam in English from the course coordinator by email (charles.bielders@uclouvain.be) at least 1 week before the start of the exam.</li> <li>For LBIR1328 (6 ECTS): The examination mark counts for 85% and the 'entry tickets' for practical work count for 15% in the final mark. For the theoretical part, the 'Climatology' part counts for 35% and the 'Hydrology' part for 65%. For the 'Hydrology' part, the part of each teacher counts proportionally to the number of sessions taught by each teacher (A. Alonso: 40%; C. Bielders: 25%).</li> <li>For LBIR1328A (2 ECTS): For the theoretical part, the 'Climatology' part counts for 50% and the 'Hydrology' part for 50%. For the 'Hydrology' part, the part of each teacher counts proportionally to the number of sessions taught by each teacher (A. Alonso: 35%; C. Bielders: 15%).</li> <li>In a second session, the mark from the successful parts of the first session can be considered when the student has obtained at least 14/20 for those successful parts. In the latter case, the student requests reconduction of the mark by writing to the course coordinator by email (charles.bielders@uclouvain.be) at least 48 hours before the start of the exam.</li> </ul> |  |  |  |  |  |
| Teaching methods                                                                                                                                                                                                                                                                                                 | Theoretical course: Lectures in audience.  Due to lecture room capacity limitations related to the COVID crisis, some part of the course can be organised at distance.  Exercises:  • Exercises in computer room • Supervised exercise sessions • Field excursion                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |  |  |  |
| Content                                                                                                                                                                                                                                                                                                          | The course introduces the student to the understanding and quantification of climatological and hydrological processes, and thus establishes the basis for designing sustainable water resources management methods. Bio-climatology  • Exchange of heat and mass in the boundary layer of the atmosphere, inside plant communities and in the top layer of the soil.  • Mechanisms of climate formation: atmospheric structure, vertical profiles in the lower layers, lateral movement, atmospheric circulation, clouds and precipitation, greenhouse effect, effects of landscape elements, dynamic and thermal action of relief and vegetation.  • Influence of human activities on climate and impacts of global climate change.  Hydrology  • Water management issues at the plot and watershed scale.  • The different components of the hydrological cycle (rain, infiltration, runoff, drainage, hypodermic flow, evapotranspiration): process, mathematical description, methods of measurement and interpretation.  • Hydrological modelling at the plot and watershed scale.  • Control structures for surface runoff and collection of runoff water.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |  |  |  |
| Inline resources  • The slides and course comments are available on the MOODLE website of the course.  • Practical work assignments are available on the MOODLE website of the course.  • Example exam questions are available on the MOODLE site of the course at least 3 weeks before the examination session. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |  |  |  |

## Université catholique de Louvain - Climatology and hydrology applied to agronomy and the environment - en-cours-2022-lbir1328
