UCLouvain lbirc2109 2022 Process engineering : unit operations

5.00 credits

52.5 h + 15.0 h

Q2

Teacher(s)	Debaste Frédéric (compensates Debecker Damien) ;Debecker Damien ;						
Language :	French > English-friendly						
Place of the course	Louvain-la-Neuve						
Prerequisites	Transfer phenoma (for partim A) Physical chemistry I and II + fuild mecanics (for partim B)						
Main themes	 Partim A Particles in flowing medium Study of a flowing liquid through porous media and membranes Mechanical processes for physical separation: sedimentation, decantation, centrifugation, filtration, cycloning, membrane separation Drying processes : drying, lyophilisation, atomisation Partim B Diffusion, mass transfer and energy transfer between phases (diffusion theory, mass transfer coefficients, film theory). Phase equilibrium Fluid/fluid and fluid/solid separation processes involving mass transfer : Distillation, liquid-liquid extraction, absorption, adsorption, crystallization 						
Learning outcomes	At the end of this learning unit, the student is able to : a. Contribution of this course to the program's LO 1.1, 1.2 2.1, 2.2, 2.4 4.2, 4.5 7.1, 7.3 b. Specific LO of this course (maximum 10) At the end of this course, the student will be able to : - name the main unitary operations of separation and purification used in the industry, give specific definitions of them and sort them into relevant categories. The operations evoked in the course are (Partim A) sedimentation, decantation, centritugation, filtration, cycloning, membrane separations, drying, lyophilization, atomization (spray drying), supercritical drying and (Partim B) distillation, liquid-liquid extraction, absorption, adsorption, crystallization name several precise examples of industrial applications for each unitary operation - describe precisely the working principle of each unitary operation both at the macroscopic scale (in flow, out flow, energy flows) and at the microscopic level (particle, interface, molecule). This description will concern both the physical and chemical phenomena involved and the thermodynamic and kinetic constraints that dictate the separation identify to operating parameters that determine the efficiency of each separation process - calculate mass and energy balance for discontinuous, semi-continuous and continuous processes and dimensioning the facilities that allow to perform them - re-write and interpret the main mathematical developments that lead to the useful equations for process dimensioning and remember at the same time what are all the simplifying hypothesis that must sometimes be used to establish models and dimensioning methods apply empirical, analytical and graphical methods classically used for unitary operation involved in an existing industrial process and elaborate a critical analysis of this step of the process, descriping its interactions with previous and subsequent steps, evaluation benchmarks).						
Evaluation methods	Written exam systematically covering the LO (theory and exercises). The written report concerning the field study in the industry weight 20% of the final grade.						

Teaching methods Lecture with a powerpoint presentation as the main support (evailables vii (Campus)). Even if the diles are used as a complex, mathematic developments, etc.). Contraintering wearches of dimensioning with a toror. Scientific articles are recommended for reading as a complement to the course. Students may be instructed to visit a company of their obtaics and to atbdy a unitary operation involved in the production process. A short, didactical and critical report is asked, in the form of a poster. The report is presented to other automations in the main support (and the course). Content Introduction Objectives' instructions: processes anginoening and unitary operations: idefinitions: main working principles of unitary operations is reparation in the Eighen relation and Cartification of the Eighen relation of a divided dial. The isolated partiel 's bunch of particles 'Daratices in fluids (Context 'Description of a divided dial' the isolated partiel 's bunch of particles 'Description i'non-location relation' (Floors through procup mode). Thereactors between the Rocary Company of the course). Content Introduction (Context 'Description of a divided diagon (Definitions'' interactions between the Rocary Company (Definitions' and Context) is enginemation and contributed of the solated partiel 's bunch of garts. The Rocary Company (Definitions and Context) is the solated opailbow (Definitions' interactions between the soperation (Description 'Applications' During) to be product). Applications' Davides 'Descriptions' Davides' Company (Description 'Application' Borts) and the divide divide displant (Description 'Application' Proceedses 'Description' Application' Borts) and the divide displant (Description)'Application' Brocher application' Trancher application'		
Objectives 'instructions' process engineering and unitary operations : definitions 'main working principles of unitary operations for separation 'the different operating modes' context 'classification of unitary operations and the separation in the different operating modes' context 'classification of unitary operations between the fluid and one particle flow regimes' accelerination rate of Plows through process modal (the Darcy is 'n Keczer's Humidy ratio 'Cake dimensions Resaince to the flow 'Operating modes' Fination technologies / Mentorane separation ('Decempton' Applications' Diffusion (Cantext' Support filtation 'Coupling ine variables' Humidy ratio 'Cake apprendixto' Prevoportation 'Membranes' in bioprocesses Drying processes Build one particle' on the 'span relation' of principles' Materials' Mass transfer 'Days's 'Electrodiayis' 'Inverted consols' 'Case permetation' Pervoportation 'Membranes' in bioprocesses Drying processes Drying processes Motivation / Definitions and concepts (wet solid' gaz-liquid-solid equilibrium' wetting enthalpy' sorption isotherms ' equilibrium diagrams / Techniques et set-up (classification ''nachines often used in the industry' drying by ebuilibrium 'darg and by'ng by concernical drying 'sorption isotherms '' equilibrium diagrams of the theod of Mc Cabe & Thiele, Study of the column with the equilibrium diagrams' actualition' consing principle. Plate columo, the method of Sorel, the method of Lewis, the method of Mc Cabe & Thiele, Study of the column with the equilibrium diagram', vapor injection on a soil' Adsorption on asoid' Adsorption equilibrium diagrams' 'Attachation in none ontact stage 'Struction with unitery often equilibrium diagram', vapor injection on a soil' Adsorption on asoid' Adsorption equilibrium and the diagram's 'Extraction with netholy digram' 'estraction with netholy diagram' 'estraction wi	Teaching methods	 a support for the lectures, an important part of the course is given orally and on the blackboard (e.g. explanations, examples, mathematic developments, etc.). Quantitative exercises of dimensioning with a tutor. Scientific articles are recommended for reading as a complement to the course. Students may be instructed to visit a company of their choice and to study a unitary operation involved in the production process. A short, didactical and critical report is asked, in the form of a poster. The report is presented to other students. Owing to the limited capacity of the class rooms, related to the restrictions of the COVID-19 crisis, some lecture
Particles in fluids (Context ') Description of a divided soil 'the isolated particle 'a bunch of particles ' Characterization of a bed of particles' / Sedimentation and Centrifugion (Definitions 'Interactions between the fluid and one particle 'flow regimes' addimentation rate)/ Flows through procus metal the Darcy law 'the Kozeny Carma model 'tuburent flow 'the Eggin relation', Pittation (Context: Support filtration 'Context: Support filtration 'Context: 'Support filtration 'Context: Support 'Support filtration 'Context: Support 'Support 'Support support 'Support 'Supp	Content	Objectives ' instructions ' process engineering and unitary operations : definitions ' main working principles of unitary operations for separation ' the different operating modes ' context ' classification of unitary operations Partim A
Metweiner / Definitions and concepts (wet solid ' gaz-liquid-solid equilibrium 'wetting enthalpy 'sorption isotherms 'equilibrium diagrams) / Techniques et set-up (classification ' machines often used in hite industry ' drying by ebulition ' drying by flow 'lyophilisation ' drying of bio-products) / Theoretical principles of drying (drying kinetics 'hygrometry' wet air diagram ' case study: the drying of cereals in a grain silo) / Alternative mode for providing energy / supercritical dryingPartim BFluid/fluid separation and fluid/solid separation involving mass transferLiquid-gaz equilibrium of binary systems (Reminders ' the Raoult law ' non ideal mixtures' Influence of pressure 'systems with more than two species) / Distillation (Basic working principles of distillation') Simple discontinuous distillation (Basic working principles of distillation') Simple discontinuous distillation (Basic working principles of distillation') Simple discontinuous distillation (Basic working principles of distillation') Continuous distillation (Rasic working principles of distillation') Continuous distillation (Rasic working principles of distillation') Simple discontinuous distillation (Basic working principles of distillation') Simple discontinuous distillation (Basic working principles of distillation') Simple discontinuous distillation (Case) (Advertice on one contact stage 'Extraction with meet otal the sequilibrium diagram, vapor injection, the method of Ponchon& Savarit, Study of the column with the equilibrium diagram', vapor injection, Hatemary diagram 'Extraction with more than two species'. Absorption in ixoto (Adsorption on a solid 'Adsorption on a solid 'Adsorption on a solid 'Adsorption on a solid 'Adsorption dequilibrium for a gue gas 'Adsorption separated stages ' Continuous transfer ' Absorption separated stages ' Adsorption pequilibrium disc and used be') (Crystallization (Definition' terystalline state' Solubility curves 'Suzardion with chemical rea		Particles in fluids (Context ' Description of a divided solid ' the isolated particle ' a bunch of particles ' Characterization of a bed of particles) / Sedimentation and Centrifugation (Definitions ' Interactions between the fluid and one particle ' flow regimes ' sedimentation rate) / Flows through porous media (the Darcy law ' the Kozeny Carman model ' turbulent flow ' the Ergun relation) / Filtration (Context ' Support filtration ' Coupling the variables ' Humidity ratio ' Cake dimensions ' Resistance to the flow ' Operating modes ' Filtration technologies) / Membrane separation (Description ' Applications ' Diffusion principles ' Materials ' Mass transfer ' Dialysis ' Electrodialysis '
Liquid-gaz equilibrium of binary systems (Reminders 'the Raoult law ' non ideal mixtures ' Influence of pressure ' Systems with more than two species) / Distillation (Basic working principles of distillation) (Basic working principles) of distillation) (Basic working principles) Flate colone, the method of Sorel, the method of Lewis, the method of Mc Cabe a Thiele, Study of the columns with the equilibrium diagram, vapor injection, the method of Ponchon8 Savarit, Study of the columns with the enthalpy diagram, Rectification of azeotropic mixtures, Rectification mixtures with more than two species, Column efficiency) / Liquid- liquid extraction (Reminders on ternary diagrams' Extraction in one contact stages' Countercurrent extraction with separate contact stages' Countercurrent extraction with refux) / Gas absorption by liquids (Equilibrium condition ' Graphical representation' Number theoretical stages' Continuous transfer 'Absorption of a pure gas' Adsorption in fixed bed) / Crystallization (Definitions' the crystalline stude' Solubility curves' Surstauration curves ' Basic principles of crystallization in solution ' Crystallization processes' Purity and morphology of crystalsInline resourcesMoodle: - sides posted at the beginning of the semester - list of exercices - remainders for mathematical formula 		Motivation / Definitions and concepts (wet solid ' gaz-liquid-solid equilibrium ' wetting enthalpy ' sorption isotherms ' equilibrium diagrams) / Techniques et set-up (classification ' machines often used in the industry ' drying by ebullition ' drying by flow ' lyophilisation ' drying of bio-products) / Theoretical principles of drying (drying kinetics ' hygrometry ' wet air diagram ' case study: the drying of cereals in a grain silo) / Alternative mode for providing energy / supercritical drying
 - slides posted at the beginning of the semester - list of exercices - remainders for mathematical formula - instructions for the plants visit Bibliography Aucun support payant n'est obligatoire. Une impression des diapositives (powerpoint) utilisées au cours et préalablement mises à disposition sur Moodle es vivement recommandée. Comme supports de cours facultatifs et disponibles en bibliothèque : - Introduction au génie des procédés de D. Ronze (Editions Tec et Doc, 2008), ISBN : 978-2-7430-1066-9 - Separation process principles de E.J. Henley, J.D. Seader, D.K. Roper (Wiley, 2011) ISBN : 978-0-470-64611-3 - Le pétrole - Rafinage et genie chimique I de P. Wuithier (Editions Technip, 1972) ISBN : 2-7108-0198-1 - Procédés de séparation de J.P. Wauquier ((Editions Technip, 1998) ISBN : 2-7108-0671-1 Other infos This course can be given in English. AGRO 		Liquid-gaz equilibrium of binary systems (Reminders ' the Raoult law ' non ideal mixtures ' Influence of pressure ' Systems with more than two species) / Distillation (Basic working principles of distillation' Simple discontinuous distillation(batch)' Continuous distillation(flash distillation)' Fractionated distillation: working principle, Plate colonne, the method of Sorel, the method of Lewis, the method of Mc Cabe & Thiele, Study of the column with the equilibrium diagram, vapor injection, the method of Ponchon& Savarit, Study of the columns with the enthalpy diagram, Rectification of azeotropic mixtures, Rectification mixtures with more than two species, Column efficiency) / Liquid-liquid extraction (Reminders on ternary diagrams ' Extraction in one contact stage ' Extraction with multiple contact stages ' Countercurrent extraction with separate contact stages ' Countercurrent extraction with reflux) / Gas absorption by liquids (Equilibrium condition ' Graphical representation ' Number theoretical stages ' Continuous transfer ' Absorption of several species ' Absorption equilibrium for a gaseous binary mixture ' Adsorption equilibrium for a liquid binary mixture - Adsorption separated stages ' Adsorption in fixed bed) / Crystallization (Definitions ' the crystalline state ' Solubility curves ' Sursaturation curves
