Q2

Teacher(s)	De Raedt Nele ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	The course involves a systematic but not exhaustive review of the major theories of architecture. It situates them chronologically, from Antiquity to the present. The course identifies recurring theoretical questions and possible causes for their recurrence. It also identifies more ephemeral questions and looks at their conditions of emergence and disappearance. The course puts theoretical elements into confrontation with concrete examples. Notions like the Vitruvian triad, the myth of the primitive hut, rules and the classical orders, models, the human body and proportion, objectivity and subjectivity of architecture will be raised and discussed.
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <p>By the end of this course, students will be able to:</p> <ul style="list-style-type: none"> • develop an overall view of the major theories of architecture within Western cultural tradition, • distinguish the themes and recurrent questions, • situate the "origins", the major stages of development, and the moments of rupture within the field of architectural theory, • take a personal position within a theoretical debate.
Evaluation methods	Oral exam based on writing exercise
Teaching methods	Lecture course Reading seminars
Content	<p>Non-exhaustive liste of topics</p> <ul style="list-style-type: none"> • What is architecture? • Theorising design practice: imitation, invention, licence • The elements of architecture: the classical orders • The objectivity or subjectivity of the art of building: good taste • The origins of architecture: the primitive hut • Architecture as system of communication • Theory and criticism: Utopias
