Q1

Teacher(s)	Van Roy Peter ;
Language :	English > French-friendly
Place of the course	Louvain-la-Neuve
Prerequisites	This course assumes that the student already masters the concepts, paradigms and semantics of the programming languages targeted by the course LINFO1104
Main themes	<ul style="list-style-type: none"> <li>• Concurrent programming paradigms (shared state, message passing, and declarative competition)</li> <li>• Major programming concepts that include function, object, class, abstraction, instantiation, inheritance, state, encapsulation, competition, dataflow, lazy evaluation, non-determinism, agent (active object), lock, monitor, transaction, deadlock, higher order programming, compositionality, etc.</li> <li>• Techniques of reasoning and design with different paradigms to design correct programs</li> <li>• Practical applications in several areas (eg logic circuits simulation, elevator simulation, transaction manager).</li> </ul>
Learning outcomes	<p><b>At the end of this learning unit, the student is able to :</b></p> <p>Given the learning outcomes of the "Bachelor in Computer science" program, this course contributes to the development, acquisition and evaluation of the following learning outcomes:</p> <ul style="list-style-type: none"> <li>• S1.I5</li> <li>• S2.2-4</li> <li>• S5.2, S5.4-5</li> </ul> <p>Students completing successfully this course will be able to</p> <p>1</p> <ul style="list-style-type: none"> <li>• define precisely and use wisely in medium-sized programs the key concepts of programming;</li> <li>• define the main paradigms of concurrent programming (shared state, message passing and declarative competition), with the concepts they contain and the properties they give to programs;</li> <li>• explain the relationships (similarities, differences) between these different paradigms;</li> <li>• explain the link between programming languages and the main paradigms of concurrent programming;</li> <li>• write medium-sized programs in these concurrent programming paradigms.</li> <li>• think using abstractions (reason correctly on a system that includes several layers of abstractions, and define new abstractions to simplify the resolution of a problem)</li> </ul>
Evaluation methods	<ul style="list-style-type: none"> <li>• Dispensatory test 25% (around week 7)</li> <li>• Project 25%</li> <li>• Final exam 50% (or 75% if redoing test part)</li> </ul> <p>The project is mandatory and is done during the quadrimester. It can only be done only once and it counts for the whole academic year. The optional dispensatory test and the final exam may be done in auditorium or online, depending on university requirements. The teacher reserves the right to give an oral examination to certain students.</p>
Teaching methods	<ul style="list-style-type: none"> <li>• Weekly lectures (in auditorium or online, according to university requirements).</li> <li>• Practical lab sessions in the computer room every week, to solve simplified problems using concepts explained during the lectures.</li> <li>• One major design and programming project to apply these concepts to a more complex application.</li> </ul>
Content	<p>The goal of this course is to present advanced concepts in programming languages, using concurrent programming as organizing principle. Among others, the course presents:</p> <ul style="list-style-type: none"> <li>• functional, higher-order, and lazy functional programming,</li> <li>• concurrent programming in its three principal forms, namely deterministic dataflow, message-passing concurrency, and shared-state concurrency,</li> <li>• a rigorous presentation of the concept of declarativeness,</li> <li>• advanced techniques for designing declarative algorithms,</li> <li>• security as applied to data abstraction,</li> <li>• the design of multi-agent systems with special emphasis on the Erlang language and its concepts,</li> <li>• a rigorous presentation of mutable state and its utility,</li> <li>• the concepts of lock, monitor, and transaction.</li> </ul> <p>All these concepts are accompanied with practical exercises.</p>
