## Complément de pharmacothérapie

|--|

Teacher(s)	Dessy Chantal ;Duhoux François ;Dujardin Nathalie ;Spinewine Anne (coordinator) ;Wertz Aline ;
Language :	French
Place of the course	Bruxelles Woluwe
Main themes	Upon completion of this course, the pharmacist should be able to:  - explain the pharmacokinetic and pharmacodynamic factors that need to be taken into account in these specific populations, when prescribing medicines  - explain the indications and contra-indications specific to each population  - understand and to manage drug interactions in these populations  - evaluate the adequacy of drug dosages  - provide appropriate counselling to patients and carers relative to their drug regimen  - discuss with other health care professionals the rational use of medicines in these specific populations  - summarise and critically appraise a published paper relative to a clinical trial relative to pharmacotherapy in the abovementioned populations.
Learning outcomes	At the end of this learning unit, the student is able to:  To acquire knowledge and skills in the pharmaceutical care of specific populations, including infants and children, elderly people, pregnant women, and drug abusers.
Evaluation methods	The assessment of learning achievements involves 2 components:  ° written examination with questions to evaluate knowledge and skills (ie theory and practice-based questions). this section accounts for 16 points.  2° oral presentation of a journal club relative to a paper relative to a specific aspect of pharmacotherapy in a specific population addressed in the present course This section accounts for 4 points.
Teaching methods	This course includes a mixed approach including interactive lectures, some homework (e-learning), and presentation of an assignment (journal club). Teachers – pharmacists and physicians with academic/clinical experience - pay special attention to making links between theory and practice and illustrate with clinical vignettes, where the role of pharmacists in optimising medicines use is highlighted.
Content	- Pharmacotherapy for several specific populations/situations, namely: pregnant and breastfeeding women; chilfren; older people; persons with cancer - For each opulation/situation: general considerations related to medicines use in these populations/situations; baprinciples in rational medicines use; pharmacotherapy for several diseases/medical problems specific to these populations; role of the pharmacist in optimising medicines use
