

4.00 credits	30.0 h	Q1
--------------	--------	----

Teacher(s)	Brichard Sonia ;Lanthier Nicolas ;Loumaye Audrey ;Thissen Jean-Paul (coordinator) ;
Language :	French
Place of the course	Bruxelles Woluwe
Main themes	Section 1 1. Fuel homeostasis 2. Regulation of energy expenditure: role of uncoupling proteins 3. Control of body weight and food intake in physiological and pathophysiological conditions 4. Pharmacological regulation of body weight Section 2 1. Anorexia nervosa, hypoglycaemia, type 1 diabetes, disorders of Ca metabolism, osteoporosis, endocrine hypertension and hypercorticism 2. Insulin resistance and the metabolic syndrome X, endocrinology of malnutrition and catabolic states, hormonal and nutritional anabolic agents, alcohol, thyroid and nutrition
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <p>The first section deals with physiological and pharmacological control of energy homeostasis. The aims of this section are " To understand the mechanisms those regulate body weight, appetite and food intake, and energy expenditure. " To characterize the deregulation of these mechanisms in some pathological conditions. " To tackle the pharmacological tools that are able to interfere with those mechanisms. The second section of this course deals with " Diseases of Nutrition and endocrine glands ". The aims of this section are to describe and discuss the relationships between nutritional disorders and functional abnormalities of the endocrine system.</p>
Content	<p>Aim: to acquire the physiopathological bases of nutritional disorders.</p> <p>Methods: lectures and personal work on topics covered (with possible oral presentation of a scientific article)</p>
Faculty or entity in charge	FASB
