Teacher(s)	De Jaeger Dominique (coordinator) ;Hardwick Robert ;					
Language :	French > English-friendly					
Place of the course	Louvain-la-Neuve					
Prerequisites	The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.					
Main themes	Sports training is a multifactorial structured process (content, methods, organization, evaluation, planification, includes the learning of complex technical movements. The main topics presented in this teaching unit at part A (30h), the biological dimension : development of basic physical capacities of strength, speed, flexibility cardiovascular endurance part B (15h), principal models in motor control and learning, motor learning varia and practical applications will be presented.					
Learning outcomes	At the end of this learning unit, the student is able to : Part A : The students will understand the theoretical foundations of training strategies for improving performance in non competitive physical activities as well as in individual and collective sports. They will be able to correctly analyse usual practices in sports and physical activities. (part A) Part B : the students will acquire theoretical references in motor learning, useful for their professional practices.					
Evaluation methods	The evaluation is carried out by means of a written exam consisting of <ul> <li>for the "Training" part, MCQ questions and some open questions with short answers.</li> <li>for the part "Motor learning", MCQ questions and one or more open questions.</li> </ul> The final mark is the arithmetic average of the marks of the "Training" and "Motor learning" parts.					
Teaching methods	Theoretical course in lecture halls; illustrations based on videos or examples drawn from personal experience.					
Content	Training part Preface: Course Introduction Section 1: Fundamental Concepts (discussion of energy systems and the different components of fitness) Section 2: Applied concepts (including principles of training, planning and recovery) Section 3: Specific issues (e.g. effects of environment and age). Summary: Review and Exam Preparation Motor learning part Introduction: Defining basic concepts Section 1: Measuring motor performance and learning Section 2: Understanding motor control (theoretical models) Section 3: Maximizing motor learning (factors that promote motor learning) Note: some components in English
