30.0 h + 30.0 h

Q2

This learning unit is not open to incoming exchange students!

Teacher(s)	Scauftaire Jonathan ;
Language :	French
Place of the course	Charleroi
Prerequisites	<i>The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.</i>
Main themes	<ol style="list-style-type: none"> 1. Biodiversity and phylogenies: nature, classification principles and analysis techniques 2. The mechanisms of evolution: the species and the mechanisms behind their emergence 3. The adaptation of organisms to their environment: nature, origin and mechanisms 4. Population ecology: life cycles, demography, migration and dispersal, life history, impact of intraspecific competition on populations 5. Community ecology: types of interactions between species; interspecific competition and community structure, prey-predator relationships 6. Biosphere: the biomes of the terrestrial globe, Walloon ecosystems, human impact on the biosphere
Learning outcomes	<p>At the end of this learning unit, the student is able to : <i>At the end of this teaching unit, the student is able to:</i></p> <ul style="list-style-type: none"> - take stock of the diversity of living organisms - explain the origin of this diversity in the light of the theory of evolution - understand how organisms interact with each other - understand how organisms adapt to their environment and to variations in the physico-chemical characteristics of their environment. - understand how populations of organisms evolve - understand the impact of human activities on the biosphere.
