

6.00 credits

55.0 h + 10.0 h

Q1

Teacher(s)	Gailly Philippe ;
Language :	French
Place of the course	Bruxelles Woluwe
Prerequisites	<i>The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.</i>
Learning outcomes	
Evaluation methods	<p>The student will demonstrate his/her learning outcomes in a written exam: questions with short answer (QSA) and/or multiple choice (QMC).</p> <p>When QMC are presented, one or more answers are proposed. The student must have all the correct answers to obtain the point. No negative points are counted.</p> <p>When QSA are offered, the student must answer in a structured and concise manner in the space provided for the answer. Care and precision are required (remember to give the units of the values used, etc).</p>
Teaching methods	The teaching activity consists of a lecture (55 hours) in the auditorium where the different contents are explained by the teacher in charge of the course. Exercises and demonstrations are carried out in the auditorium (TD 10h).
Content	<p>The teaching is essentially oriented in a physical and physico-chemical perspective: the knowledge acquired in the first year is therefore fundamental. Moreover, physiology is an experimental science: it is from the description of observations that the theories explaining the basic cellular functions are deduced. Finally, special emphasis will be placed on the cellular bases of certain diseases.</p> <p>The practical work is done in large audiences and consists of exercises and demonstrations. Their purpose is to illustrate and explain theoretical concepts. They also introduce the students to the experimental approach and the adequate and precise description of results obtained with simple methods and a critical analysis of the observations.</p>
Inline resources	Course materials: 3 syllabi (Moodle and/or paper copies)
