CHG2MC - Information

Learning outcomes

This complementary master's programme aims to prepare doctors to become officially recognised holders of the specific professional title of Specialist Doctor in Surgery (Ministerial decree of 12.12.2002, published on 20.02.2003).

Evaluation

Ongoing evaluation is assured by the practical training supervisor and the results are passed on to the president of the committee by means of a special form. Annual evaluation is carried out on the basis of these forms and includes assessment of effective participation in the training (both university-based and organised by scientific firms).

Federal exams are organised by the Ministry of Public Health in the 2nd and 6th years of the programme (final exams). Further to the application of the Royal Decree of 16 March, 1999, at the end of the first two years of training, the candidate will receive an attestation proving that he has successfully accomplished a specific university training course.

Registration for the final exams is only authorised if the candidate has published an article and a paper in connection with the speciality. Upon fulfilment of the above-described training requirements, the teaching committee will award the academic title in Surgery.

This title does not replace official recognition by the ministerial validation committee. It attests the successful completion of an academic and scientific study programme in the context of specialised training leading to this validation.

CHG2MC - Detailed programme

Programme structure

The training course includes full time apprenticeships in recognised services and teaching centres. It lasts for at least six years, full-time. The apprenticeship project established by the university promotor must be approved by the ministerial validation committee for the speciality. These periods of practical training include being on call.

Programme by subject

Parallel to the practical training, the specialist candidate will follow a university training programme organised as follows :

part - Foundation studies

These two years of training consist of :

- theory : directives on operator and surgical techniques, including general pathology, loco-regional and general anaesthesia, resuscitation, traumatology and emergency care.
- seminars (including 6 hours of training on communication)
- supervised hospital training, organised within the apprenticeship services.

The theoretical sessions of the first two years form part of the specific university training programme (FUS, in French).

part - Higher studies

Four years of training, consisting of :

- seminars (disciplinary and inter-disciplinary seminars on thoracic and vascular surgery, digestive and pediatric surgery, organ transplants).
- supervised hospital training (clinical demonstrations of digestive and general surgery, organ transplant surgery, vascular and thoracic surgery).
