Information

Learning outcomes

The aim of the minor in linguistics is to provide students with a general introduction to language sciences, in particular linguistics. At the end of the minor, students will have developed skills in looking at language as an overall sign, rather than just a linguistic sign. In order to take this thought process further, the student must have grasped a certain number of vital concepts in order to understand how language works internally (basic units and structure, contemporary theoretical trends) and externally (relationship with other disciplines). This is why, alongside general or applied linguistics classes, the program also crosses over into other related disciplines which study language : language philosophy, psycholinguistics, la semiology or textual analysis. Given that statistics and (linguistic) I.T. have become (practically) indispensable tools for linguistic analysis, these classes will also form part of the minor program.

Teaching method

The courses make use of a variety of teaching techniques and strategies (lectures, group work, individual work, seminars, reading etc.) which help students to acquire the necessary skills. Certain courses also use e-learning techniques (provision of resources and exercises, teaching devices, collective sharing and assessment of work).

Evaluation

According to the type of course, there are different forms of assessment. Certain courses have traditional oral and/or written assessments (which take place in the examination periods in January, June and August/September), while seminars involve student participation throughout the semester and the assessment of individual work. Further details on the assessment method are given at the beginning of each course.

Course examinations on communication skills are designed to test performance, that is to say practical use of the language in meaningful situations, which demonstrate students' level of ability.

Teaching activities are assessed in accordance with the rules currently in force at the University (see [General Examination Regulations](#)). Students may also find additional information on the particular methods of assessment in the course descriptions.
