## SINF2M - Introduction

### Introduction

---

#### Introduction

This Master's degree programme tries to strike a balance between "soft skills" and scientific and technical knowledge, between excellence in research and the pragmatism of field work. It offers:

- an approach to computer science based on fundamental concepts that keep up with the rapid pace of technological progress;
- a programme taught entirely in English in order to improve students' language skills, especially in technical English (both written and spoken);
- exchange programmes and dual degrees in Belgium, Europe and across the world.

#### Your Profile

You would like to

- Imagine, design, and implement computer science systems that will shape the future;
- continue your education beyond the Bachelor's degree with a major in computer sciences (or the equivalent);
- improve your theoretical knowledge and develop your technical expertise in fields like artificial intelligence, computer networks, information security, software engineering and programming systems;
- improve your interdisciplinary knowledge in areas such as foreign languages, resource management, teamwork, autonomy and ethics.

#### Your Future Job

We train

- scientists who know how to investigate a sharp problematic using scientific literature in the field;
- professionals who will design computer systems that meet users' needs;
- innovators who can master a wide range of constantly evolving technologies;
- specialists capable of implementing software solutions with particular attention paid to product quality and its development process.

#### Your Programme

This Master's degree programme consists of

- **required coursework** that seeks to give students the necessary skills to model and design complex applications (which is an indispensable part of the education of all university-trained computer scientists);
- **a major** selected by students that allows them to gain cutting edge knowledge in a field of their interest: software engineering and programming systems, artificial intelligence and big data, networks and security;
- **elective courses** that allow students to explore their interests whether it be computer science or another discipline (management, business creation, languages). As a comprehensive university, UCL has numerous courses of study;
- **a graduation project** that makes up half of the programme during the last year. It offers students the possibility to study a subject in-depth and thanks to its size, introduces students to the professional life of a computer scientist or researcher; the topic of this project is selected in consultation with the programme supervisors and possibly a company.

## SINF2M - Teaching profile

### Learning outcomes

#### The computer science developers and designers of tomorrow face two major challenges:

- increasingly complex computer science systems
- increasingly varied areas of application

#### In order to meet these challenges, future diploma holders should

- master real computer science technologies but also keep up with their constant progress
- innovate by integrating in computer systems elements linked to artificial intelligence, software engineering, and security networks
- work as part of multidisciplinary teams that take into account non-technical issues, be open to social sciences and the humanities to help with this task.

#### This programme is based on research:

UCL is a research university. The computer science research conducted at the institute ICTEAM is internationally recognised. Through the major courses offered in this Master's degree programme, students will be able to take advantage of cutting edge knowledge. In addition to providing fundamental knowledge, this programme is based on the in-depth understanding of concepts and the ability to think abstractly. These tools allow students to quickly adapt to the needs of companies. Moreover, this research may be continued through projects carried out at the doctoral level.

#### Applying concepts:

The application of concepts is a key part of this Master's degree programme. It is inconceivable that students can master theoretical concepts but not know how to apply them to a concrete problem. Thus, the programme includes a number of projects and studies, a large-scale graduation project and the possibility of completing an internship in a company.

#### International openness:

English is de facto the most used language in companies and those in the technical field in particular. This Master's degree programme is thus taught in English, which gives our students good speaking and writing skills. By offering a Master's degree in English, this programme demonstrates its international openness. The use of English allows the programme to welcome international students while at the same time immersing them in a French-speaking environment. It also increases the possibility of exchanges and dual diplomas with other (non-Belgian) universities.

On successful completion of this programme, each student is able to :

1. demonstrate mastery of a solid body of knowledge in computer science allowing them to solve problems raised in their field of study

This Master's degree programme aims to provide students with advanced knowledge. A diversity of subjects are offered in the common curriculum and students specialise via a major:

- security networks;
- programming systems;
- software engineering;
- artificial intelligence .

2. organise and carry out the development of a computer system that meets the complex demands of a client

2.1. Analyse a problem to solve or the functional needs to be met and formulate a corresponding specifications note.

2.2. Model a problem and design one or more technical solutions in line with the specifications note.

2.3. Evaluate and classify the solutions in light of all the criteria included in the specifications note: efficiency, feasibility, quality, ergonomics and environmental security.

2.4. Implement and test the chosen solution.

2.5. Come up with recommendations to improve the operational nature of the solution.

3. organise and carry out a study to understand a new problem in the field

3.1. Document and summarize the existing body of knowledge in the area under consideration

3.2. Propose a model and/or an experimental device in order to simulate or test a hypotheses relating to the phenomenon being studied

3.3. Write a cumulative report that explains the potential of the theoretical or technical innovations resulting from the research project

4. contribute as part of a team to the planning and completion of a project while taking into account its objectives, allocated resources, and constraints

4.1. Frame and explain the project's objectives (in terms of performance indicators) while taking into account its issues and constraints

4.2. Collaborate on a work schedule, deadlines and roles

4.3. Work in a multidisciplinary environment with peers holding different points of view; manage any resulting disagreement or conflicts

4.4. Make team decisions and assume the consequences of these decisions (whether they are about technical solutions or the division of labour to complete a project)

5. communicate effectively (orally or in writing) with the goal of carrying out assigned projects in the workplace (in English in particular)

- 5.1. Identify the needs of the client or the user: question, listen and understand all aspects of their request and not just the technical aspects.
- 5.2. Present your arguments and adapt to the language of your interlocutors: technicians, colleagues, clients, superiors
- 5.3. Communicate through graphics and diagrams: interpret a diagram, present project results, structure information
- 5.4. Read and analyse different technical documents (rules, plans, specification notes)
- 5.5. Draft documents that take into account contextual requirements and social conventions
- 5.6. Make a convincing oral presentation using modern communication techniques.
6. Demonstrate rigor, openness and critical thinking as well as a sense of ethics in your work
- 6.1. Rigorously apply the standards of your discipline (terminology, measurement units, quality standards and security)
- 6.2. Find solutions that go beyond strictly technical issues by considering sustainable development and the socio-economic ethics of a project
- 6.3. Demonstrate critical awareness of a technical solution in order to verify its robustness and minimize the risks that may occur during implementation.
- 6.4. Evaluate oneself and independently develop necessary skills to remain knowledgeable in the field.

## Programme structure

---

The programme consists of four parts:

- a common curriculum, mainly the graduation project (36 credits).
- a final specialisation, required (30 credits).
- one or more majors allowing for specialisation in a field of computer science (20-54 credits).
- elective courses (0-54 credits).

The graduation project is normally carried out in the last year. However, students may, depending on their training, conduct other courses in either the first or second year so long as they have completed the prerequisite courses. This is especially the case for students who have completed a portion of their studies abroad. The yearly allocation of course activities found in the detailed programme description is for information purposes only.

In general, this Master's degree will consist of a minimum of 120 credits spread over two years with 60 credits taken per year (regardless of the focus, major or elective courses selected).

*For a programme-type, and regardless of the focus, options/or elective courses selected, this master will carry a minimum of 120 credits divided over two annual units, corresponding to 60 credits each.*

## OPTIONS

Students must complete their programme with major and or elective courses. They may select 54 credits from among the following courses:

### Options en sciences informatiques

- > Major in Artificial Intelligence: big data, optimization and algorithms [ en-prog-2017-sinf2m-lsinf223o ]
- > Major in Software Engineering and Programming Systems [ en-prog-2017-sinf2m-lsinf224o ]
- > Major in Security and Networking [ en-prog-2017-sinf2m-lsinf225o ]
- > Data science and Applied Mathematics [ en-prog-2017-sinf2m-lsinf226o ]

### Major in business creation and management

- > Major: Business risks and opportunities [ en-prog-2017-sinf2m-lsinf230o ]
- > Interfaculty major in small and medium sized business creation [ en-prog-2017-sinf2m-lsinf227o ]

### Cours aux choix

- > Elective courses [ en-prog-2017-sinf2m-lsinf922o ]
- > Cours au choix en sciences informatiques [ en-prog-2017-sinf2m-lsinf923o ]

## OPTIONS EN SCIENCES INFORMATIQUES

### MAJOR IN ARTIFICIAL INTELLIGENCE: BIG DATA, OPTIMIZATION AND ALGORITHMS

Students completing the major in Artificial Intelligence: big data, optimization and algorithms will be able to: Identify and implement methods and techniques that allow software to solve complex problems that when solved by humans require "intelligence", Understand and put to good use methods and techniques relating to artificial intelligence such as automatic reasoning, research and heuristics, acquisition and representation of knowledge, automatic learning, problems associated with overcoming constraints, Identify applications and its methods and tools; understand a particular category of applications and its related techniques, for example robotics, computer vision, planning, data mining, computational linguistics and bioinformatics, big data processing, Formalise and structure a body of complex knowledge and use a systematic and rigorous approach to develop quality "intelligence" systems.

● Mandatory

△ Courses not taught during 2017-2018

⊕ Periodic courses taught during 2017-2018

⊗ Optional

⊖ Periodic courses not taught during 2017-2018

■ Activity with requisites

Click on the course title to see detailed informations (objectives, methods, evaluation...)

The student shall select

De 20 à 30 CREDITS parmi

Year

1 2

#### ● Required courses in Artificial Intelligence: big data, optimization and algorithms

⊗ LINMA1702	Optimization models and methods I	François Glineur	30h +22.5h	5 Credits	2q	x	x
⊗ LINMA2450	Combinatorial optimization	Jean-Charles Delvenne (coord.) Julien Hendrickx	30h +22.5h	5 Credits	1q	x	x
⊗ LINMA2472	Algorithms in data science	Vincent Blondel Jean-Charles Delvenne (coord.) Gautier Krings	30h +22.5h	5 Credits	1q	x	x
⊗ LSINF2275	Data mining & decision making	Marco Saerens	30h+15h	5 Credits	2q	x	x

**MAJOR IN SOFTWARE ENGINEERING AND PROGRAMMING SYSTEMS**

Students completing the major "Software engineering and programming systems" will be able to: Understand and explain problems that come up during large scale software projects as well as the long-term critical impact that their choice of solutions may have (construction dimensions as well as validation, documentation, communication and management of a project involving large teams as well as costs and deadlines), Select and apply methods and tools of software engineering to develop complex software systems and meet strict quality standards: reliability, adaptability, scalability, performance, security, usefulness, Model the products and processes necessary to obtain such systems and analyse these models, Develop and implement analytical programmes focused on conversion and optimisation as well as computer representations, Put to good use different programming paradigms and languages, in particular those that deal with functional, object-oriented and competing programmes, Understand the issues associated with different and competing programming models and use the appropriate model, Define a new language (syntax and semantics) suitable to a specific context.

⊗ **Alternative to the major in business risks and opportunities for computer science students**

*Computer science students who have already taken courses in this field while pursuing their Bachelor's degree may choose between 16-20 credits from the courses offered in the management minor for computer sciences.*

## INTERFACULTY MAJOR IN SMALL AND MEDIUM SIZED BUSINESS CREATION

This major is not open to students enrolled in the business risks and opportunities major. This major is not offered in English. The goal of this major is to familiarise the civil engineering student with the specifics of small and medium sized businesses, entrepreneurship, and business development in order to develop the necessary abilities, knowledge and tools to create a business. This major is reserved for a small number of students and selection is based on a written application and individual interview. The written application must be submitted before the start of the academic year for Master's 1. Applications may be sent to: Secrétariat CPME-Place des Doyens, 1 1348 Louvain-la-Neuve (tel. 010/47 84 59) Selected students will replace their Master's thesis in the common core curriculum with a thesis related to business creation (the number of credits remaining the same).

○ Mandatory

△ Courses not taught during 2017-2018

⊕ Periodic courses taught during 2017-2018

⊗ Optional

⊖ Periodic courses not taught during 2017-2018

■ Activity with requisites

Click on the course title to see detailed informations (objectives, methods, evaluation...)

Further information about this major may be found at <http://www.uclouvain.be/cpme>. This major may not be taken at the same time as a major in management. Students in this major may choose 20-25 credits from the following courses:

De 3 à 21 CREDITS parmi

Year

1 2

#### o Compétences transversales et contact avec l'entreprise

L'étudiant choisit minimum 3 crédits parmi un stage, un ou plusieurs cours de l'option "Enjeux de l'entreprise", l'option "CPME", une UE d'activité professionnelle liée à la discipline  
Min=3 credits parmi

##### ⌘ Internship

⌘ LFSA2995	Company Internship	Jean-Pierre Raskin	30h	10 Credits	1 + 2q	X	X
⌘ LFSA2996	Company Internship			5 Credits	1 + 2q	X	X

##### ⌘ Professional integration activity specific to the program

⌘ LINGI2399	Industrial seminar in computer science	Yves Deville Bernard Geubelle	30h+0h	3 Credits	2q	X	X
⌘ LINGI2402	Open Source Project			5 Credits		X	X

#### ⌘ Communication

L'étudiant choisit maximum 8 crédits visant le développement de ses compétences de communication  
Max=8 CREDITS parmi

##### ⌘ Languages

Students may select from any language course offered at the ILV. Special attention is placed on the following seminars in professional development:

⌘ LALLE2500	Professional development seminar German	Caroline Klein Ann Rinder (coord.)	30h	3 Credits	1 + 2q	X	X
⌘ LALLE2501	Professional development seminar-German	Caroline Klein Ann Rinder (coord.)	30h	5 Credits	1 + 2q	X	X
⌘ LESPA2600	Vocational Induction Seminar - Spanish (B2.2/C1)	Paula Lorente Fernandez (coord.)	30h	3 Credits	1q	X	X
⌘ LESPA2601	Vocational Induction Seminar - Spanish (B2.2/C1)	Paula Lorente Fernandez (coord.)	30h	5 Credits	1q	X	X
⌘ LNEER2500	Seminar of Entry to professional life in Dutch - Intermediate level	Isabelle Demeulenaere (coord.) Mariken Smit	30h	3 Credits	1 ou 2q	X	X
⌘ LNEER2600	Seminar of entry to professional life in Dutch - Upper-Intermediate level	Isabelle Demeulenaere (coord.)	30h	3 Credits	1 ou 2q	X	X

##### ⌘ Group dynamics

⌘ LFSA2351A	Group dynamics	Piotr Sobieski (coord.) Vincent Wertz (coord.)	15h+30h	3 Credits	1q	X	X
⌘ LFSA2351B	Group dynamics	Piotr Sobieski (coord.) Vincent Wertz (coord.)	15h+30h	3 Credits	2q	X	X

#### ⌘ Autre UE non disciplinaires

L'étudiant peut proposer maximum 8 crédits d'ouverture vers d'autres disciplines (maximum un cours BEST ou des UE hors EPL).  
Max=8 CREDITS parmi

## Course prerequisites

A document entitled (nb: not available for this programme sinf2m) specifies the activities (course units - CU) with one or more prerequisite(s) within the study programme, that is the CU whose learning outcomes must have been certified and for which the credits must have been granted by the jury before the student is authorised to sign up for that activity.

These activities are identified in the study programme: their title is followed by a yellow square.

As the prerequisites are a requirement of enrolment, there are none within a year of a course.

The prerequisites are defined for the CUs for different years and therefore influence the order in which the student can enrol in the programme's CUs.

In addition, when the panel validates a student's individual programme at the beginning of the year, it ensures the consistency of the individual programme:

- It can change a prerequisite into a corequisite within a single year (to allow studies to be continued with an adequate annual load);
- It can require the student to combine enrolment in two separate CUs it considers necessary for educational purposes.

For more information, please consult [regulation of studies and exams](#).

## The programme's courses and learning outcomes

For each UCL training programme, a [reference framework of learning outcomes](#) specifies the competences expected of every graduate on completion of the programme. You can see the contribution of each teaching unit to the programme's reference framework of learning outcomes in the document "In which teaching units are the competences and learning outcomes in the programme's reference framework developed and mastered by the student?"

## SINF2M - Information

### Admission

*General and specific admission requirements for this program must be satisfied at the time of enrolling at the university..*

#### SUMMARY

- > [Specific Admission Requirements](#)
- > [University Bachelors](#)
- > [Non university Bachelors](#)
- > [Holders of a 2nd cycle University degree](#)
- > [Holders of a non-University 2nd cycle degree](#)

### Specific Admission Requirements

This programme is taught in English with no prerequisite in French. The student is supposed to have at least a B2 level in the European Framework of Reference.

#### University Bachelors

Diploma	Special Requirements	Access	Remarks
<b>UCLouvain Bachelors</b>			
		Direct Access	
		Access with additional training	
<b>Others Bachelors of the French speaking Community of Belgium</b>			
		Direct Access	
<b>Bachelors of the Dutch speaking Community of Belgium</b>			
		Direct Access	
<b>Foreign Bachelors</b>			
		Based on application: accepted, conditional on further training, or refusal	

#### Non university Bachelors

Diploma	Access	Remarks
BA en informatique de gestion - EPS - crédits supplémentaires entre 30 et 60	Les enseignements supplémentaires éventuels peuvent être consultés dans le <a href="#">module complémentaire</a> .	Type court
BA en informatique de gestion - HE - crédits supplémentaires entre 30 et 60		
BA en informatique et systèmes (informatique industrielle) - EPS - crédits supplémentaires entre 30 et 60		
BA en informatique et systèmes (informatique industrielle) - HE - crédits supplémentaires entre 30 et 60		
BA en informatique et systèmes (réseaux et télécommunications) - EPS - crédits supplémentaires entre 30 et 60		
BA en informatique et systèmes (réseaux et télécommunications) - HE - crédits supplémentaires entre 30 et 60		
BA en informatique et systèmes (sécurité des systèmes) - HE - crédits supplémentaires entre 30 et 60		
BA en informatique et systèmes (sécurité des systèmes) - EPS - crédits supplémentaires entre 30 et 60		

BA en informatique et systèmes (technologie de l'informatique) -  
EPS - crédits supplémentaires entre 30 et 60  
BA en informatique et systèmes (technologie de l'informatique) -  
HE - crédits supplémentaires entre 30 et 60

## Holders of a 2nd cycle University degree

Diploma	Special Requirements	Access	Remarks
"Licenciés"			
Masters			

## Holders of a non-University 2nd cycle degree

### Adults taking up their university training

> See the website [Valorisation des acquis de l'expérience](https://uclouvain.be/fr/etudier/vae) (<https://uclouvain.be/fr/etudier/vae>)

It is possible to gain admission to all masters courses via the validation of professional experience procedure.

### Access on the file

Reminder : all Masters (apart from Advanced Masters) are also accessible on file.

## Admission and Enrolment Procedures for general registration

## Supplementary classes

**To enrol for this Masters, the student must have a good command of certain subjects. If this is not the case, they must add preparatory modules to their Master's programme.**

○ Mandatory

△ Courses not taught during 2017-2018

⊕ Periodic courses taught during 2017-2018

⊗ Optional

⊖ Periodic courses not taught during 2017-2018

■ Activity with requisites

## Teaching method

---

### Active learning and non-technical skills

You will play an active role in your training. The pedagogical approach is a well-balanced mix of lectures, exercises, and projects to be carried out alone or in a group. The teaching methods vary. Sometimes, you will discover concepts and techniques independently. At these times, the teaching team acts as a resource in the learning process. At other times, the pedagogy focuses on transmitting the knowledge necessary to complete future tasks.

Special emphasis is placed on non-technical skills (autonomy, organisation, time management, different modes of communication, etc.) In particular, by emphasising project-based activities (including a large scale project that puts students in a semi-professional situation), this programme develops students' critical thinking skills, which allows them to design, model, implement, and validate complex computing systems.

### Languages

The lingua franca of computer science is English. The use of English in the programme allows students to develop their mastery of this language, which facilitates their integration into professional life. All course material and course supervision are in English. However, students may always ask or respond to exam questions in French if desired.

Moreover, the programme allows students to attend language courses at the university's Language Institute (ILV) and to take part in exchange programmes.

### Interdisciplinary approach

Over the course of their careers, computer scientists are expected to manage projects as well as teams and show interest in the complex socio-economic environment in which computer science belongs. It is therefore suggested that students learn about disciplines through elective courses or certain major courses such as the interfaculty major "small and medium sized business creation".

## Evaluation

---

***The evaluation methods comply with the regulations concerning studies and exams (<https://uclouvain.be/fr/decouvrir/rgee.html>). More detailed explanation of the modalities specific to each learning unit are available on their description sheets under the heading "Learning outcomes evaluation method".***

The learning activities are assessed according to the rules of the University (see [exam regulations \(https://uclouvain.be/en-enseignement-reglements.html\)](https://uclouvain.be/en-enseignement-reglements.html)), that is through written and oral exams, personal or group assignments, public presentation of projects and defence of the graduation thesis. For the courses given in English, questions will be expressed in English by the teacher, but the student may choose to answer in French. For the courses given in French, the questions will be expressed in French by the teacher, but the student may ask for help in translation and choose to answer in English.

Some activities such as projects during the semester under the supervision of the teaching staff and in collaboration with other students are not reorganized outside the period prescribed for the course. They are not re-evaluated at a later session.

Evaluation methods specific to each course are communicated to students by teachers at the beginning of the semester.

## Mobility and/or Internationalisation outlook

---

### Outgoing Students

Since their creation, the Louvain School of Engineering (EPL) has participated in various exchange programmes in Europe and worldwide.

Students may first become interested in such exchanges at the end of their Bachelor's degree programme mainly through intensive courses offered as part of the ATHENS or BEST networks. These networks are also open to students in the Master's degree programme and provide an initial experience in international education.

In addition, in the context of the Erasmus and Mercator exchange programmes, students have the possibility of studying at a partner university typically for one year (two semesters) in the first year of the Master's degree programme or five months (first semester) in the second year of the Master's degree programme. As a result, the EPL is a member of different networks.

-In Belgium, the EPL maintains a privileged partnership with the Faculteit Ingenieurswetenschappen of the Katholieke Universiteit Leuven with which it has developed an exchange programme covering the first year of the Master's degree.

-At the European level, the EPL is especially involved in the CLUSTER network. This network guarantees quality both in terms of education and in terms of hosting exchange students. Moreover, the CLUSTER partners have signed an agreement to recognize the Bachelor degree programmes of their members. This agreement implies that all Bachelor degree holders from CLUSTER member institutions are subject to the same admission criteria to CLUSTER Master's degree programmes as local students.

-Outside of Europe, the EPL is a member of the Magalhaes network that joins together around fifteen European universities with the best science and technology universities in Latin America.

In addition to these network partnerships, the Louvain School of Engineering has signed a number of individual agreements with various universities in Europe, North America and elsewhere in the world. The list of these agreements can be found on UCL's International Relations Administration website.

Moreover, several dual degree programmes have also been set up.

Dual Master's degree agreements allow students to obtain engineering degrees from two universities after they have completed one year at UCL and the other at a host university. In computer science engineering, such agreements have been established with UPC (Barcelona, Spain) and Grenoble (France). Others are currently being negotiated.

Students are informed about the various exchange programmes at the start of the second year of their Bachelor's degree programme. It is recommended that they prepare for these exchanges well in advance, most notably at the linguistic level through courses at the university's Language Institute (ILV).

Beyond exchange programmes, students may participate in an internship in a research laboratory or in a company abroad.

More information about [exchange programmes](#) at EPL.

### Incoming students

As part of the CLUSTER network, foreign students may benefit from exactly the same status and conditions as UCL students, which favours Erasmus exchanges for students coming from network member institutions.

The entire programme is offered in English and can be taken without prior knowledge of French, except for the majors in biomedical engineering, business management and small and medium sized business creation. All courses, except for a few rare exceptions, are given in English. For non-francophone students, alternatives to the courses in French will be proposed by the programme commission on a case-by-case basis according to the student's curriculum.

For more information about [exchange programmes](#) at EPL

## Possible trainings at the end of the programme

-Accessible supplementary masters : not applicable.

-Accessible doctoral programmes:

The master in computer science engineering opens access to a Doctorate in Engineering (doctorat en sciences appliquées). In this context, doctoral students are enrolled in one of the thematic doctoral schools.
