FARM2300 **Pratique professionnelle du pharmacien**

[15h]

Teacher(s): Benoît Mousset
Language: french
Level: 2nd cycle course

Aims

At the end of this cursus, student must be able to use the multidisciplinary knowledge acquired during their studies and the scientific bibliography to resolve concrete problems occurring in a pharmacy.

Main themes

Study of clinical cases or potential problems occurring in a pharmacy (interactions, polymedication, side effects, in physical, chemical or pharmacological incompatibilities) and find a process to resolve them with knowledge acquired during their studies.

Content and teaching methods

Three hours a preliminary talk clarifies the role of the pharmacist. Some two hours seminars are organized by small groups (maximum 10 students), in the areas where the training courses are held; the Masters of training course are invited to take part in it.

The students report the problems encountered during their training course since the last meeting and these cases are discussed. Each student receives two real clinical cases encountered recently in a dispensary open to the public and it prepares its answers during 10 to 15 minutes by having a many documentation at its disposal.

One of the meetings is devoted to the study of texts with problems in which the trainees must seek solutions of publication.

Organization for the voluntary ones of meetings between trainees doctors and pharmacists
