GEOG3133 Séminaire de cartographie et télédétection

[30h] 2.5 credits

Teacher(s): Eric Lambin
Language: french
Level: 3rd cycle course

Aims

This seminar explores advanced techniques in cartography and remote sensing and discusses recent applications of these techniques. The seminar is based on invited specialists in remote sensing and cartography, working in public international organisations specialized in research or environmental monitoring. It confronts students with the professional world in the field of their specialization.

Main themes

Each seminar is based on a recent publication. A 45 minute presentation is followed by a discussion. Themes vary from year-to-year and include: remote sensing (optical, hyperfrequency), spatial modelling, photogrammetry, topography, geographical information systems.

Other credits in programs

CART3DS	Diplôme d'études spécialisées en cartographie et télédétection	Mandatory
