INMA2111 Discrete mathematics II : Algorithms and complexity

[30h+15h exercises] 4 credits

This course is taught in the 2nd semester

Teacher(s): Vincent Blondel, Laurence Wolsey, Laurence Wolsey (supplée Vincent Blondel)
Language: French
Level: Second cycle

Aims

Study of algorithms for a variety of combinatorial problems from several points of view, including existence, algorithm design, data structures, performance analysis and complexity status.

Main themes

The course is an introduction to algorithms and their complexity from a non-numerical point of view. The principal topic is the mathematical analysis of the existence of algorithms and their complexity on the classical problems of the field.

Content and teaching methods

Introduction to the basic algorithms for sorting and the efficient implementation of different data structures including an analysis of worst case and average case complexity.

Treatment of important algorithm classes including greedy and dynamic programming algorithms. Aspects of complexity theory including NP-completeness, complexity classes and decidability.

Other information (prerequisite, evaluation (assessment methods), course materials recommended readings, ...)

Introduction to Algorithms, T.H. Cormen, C.E. Leieron and R.L. Rivest, MIT Press 1986.

Algorithmics: Theory and Practice, G. Brassard and P. Bratley, Prentice Hall 1988.

Programmes in which this activity is taught

INFO2 Ingénieur civil informaticien

Other credits in programs

INFO23	Troisième année du programme conduisant au grade d'ingénieur civil informaticien	(4 credits)
MAP22	Deuxième année du programme conduisant au grade d'ingénieur civil en mathématiques appliquées	(4 credits)
MAP23	Troisième année du programme conduisant au grade d'ingénieur civil en mathématiques appliquées	(4 credits)
