

Faculty of Medicine

KINE2160 Disabilities due to working conditions

[30h] 2.5 credits

Teacher(s): Anne Berquin, Bénédicte Schepens (coord.)
Language: French
Level: Second cycle

Aims

The objective of the course is to analyze the driving processes with the incapacity whose cause finds its origin in a bad adaptation of work. By this work, it is necessary to hear the interactions between the man and the machine in the broad sense, which intervenes as well within the professional framework (in normal and protected economy) as extra-professional (activities of the life day labourer, leisures...). The goal of the course will be to study the consequences of too significant working stresses on the driving, sensitive and mental level.

Main themes

One will study the criteria of acceptability of the short-term and long-term working stresses, just as the consequences of a going beyond of these criteria in the following fields: - postures; - the physical load of work; - physical environments of work; - mental effects; - the sensory load.

Content and teaching methods

One will study the criteria of acceptability of the short-term and long-term working stresses, just as the consequences of a going beyond of these criteria in the following fields: - postures; - the physical load of work; - physical environments of work; - mental effects; - the sensory load.
